6 wellness way latham new york: If Our Bodies Could Talk James Hamblin, 2016-12-27 If you want to understand the strange workings of the human body, and the future of medicine, you must read this illuminating, engaging book. —Siddhartha Mukherjee, author of *The Gene* In 2014, James Hamblin launched a series of videos for The Atlantic called *If Our Bodies Could Talk*. With it, the doctor-turned-journalist established himself as a seriously entertaining authority in the field of health. Now, in illuminating and genuinely funny prose, Hamblin explores the human stories behind health questions that never seem to go away—and which tend to be mischaracterized and oversimplified by marketing and news media. He covers topics such as sleep, aging, diet, and much more: • Can I “boost” my immune system? • Does caffeine make me live longer? • Do we still not know if cell phones cause cancer? • How much sleep do I actually need? • Is there any harm in taking a multivitamin? • Is life long enough? In considering these questions, Hamblin draws from his own medical training as well from hundreds of interviews with distinguished scientists and medical practitioners. He translates the (traditionally boring) textbook of human anatomy and physiology into accessible, engaging, socially contextualized, up-to-the-moment answers. They offer clarity, examine the limits of our certainty, and ultimately help readers worry less about things that don't really matter. *If Our Bodies Could Talk* is a comprehensive, illustrated guide that entertains and educates in equal doses.

His multifaceted practice encompasses sculpture, installation, painting, film, land art, engineering, found-object, assemblage, performance happenings and theoretical writings, the diversity of which is galvanised by his unique understanding of our place in the universe. Latham saw the artist as holding up a mirror to society: an individual whose dissent from the norm could lead to a profound reconfiguration of reality as we know it. Latham has been associated with several national and international artistic movements, including the first phase of conceptual art in the 1960s. He was an important contributor to the Destruction in Art Symposium of 1966, and also a co-founding member of the Artist Placement Group APG (1966-89). The Serpentine Gallery exhibition (and this accompanying catalogue) spans Latham's career to include his iconic spray and roller paintings; his one-second drawings; films such as *Erth* (1971), and Latham's monumental work, *Five Sisters* (1976) from his Scottish Office placement with APG. With an interdisciplinary approach, this new edition, divided into five sections, begins by examining healthcare as an integrated system. Chapter 1 provides a hierarchical model of healthcare, rising from departments, to centers, regions and the "macro system." A new chapter demonstrates how to use simulation to assess the interaction of system components to achieve performance goals, and Chapter 3 provides hands-on methods for developing process models to identify and remove bottlenecks, and for developing facility plans. Section 2 addresses crowding and the consequences of delay. Two new chapters (4 and 5) focus on delays in emergency departments, and Chapter 6 then examines medical outcomes that result from waits for surgeries. Section 3 concentrates on management of demand. Chapter 7 presents breakthrough strategies that use real-time monitoring systems for continuous improvement. Chapter 8 looks at the patient appointment system, particularly through the approach of advanced access. Chapter 9 concentrates on managing waiting lists for surgeries, and Chapter 10 examines triage outside of emergency departments, with a focus on allied health programs Section 4 offers analytical tools and models to support analysis of patient

flows. Chapter 11 offers techniques for scheduling staff to match patterns in patient demand. Chapter 12 surveys the literature on simulation modeling, which is widely used for both healthcare design and process improvement. Chapter 13 is new and demonstrates the use of process mapping to represent a complex regional trauma system. Chapter 14 provides methods for forecasting demand for healthcare on a region-wide basis. Chapter 15 presents queueing theory as a method for modeling waits in healthcare, and Chapter 16 focuses on rapid delivery of medication in the event of a catastrophic event. Section 5 focuses on achieving change. Chapter 17 provides a diagnostic for assessing the state of a hospital and using the state assessment to select improvement strategies. Chapter 18 demonstrates the importance of optimizing care as patients transition from one care setting to the next. Chapter 19 is new and shows how to implement programs that improve patient satisfaction while also improving flow.
