desert healthcare wellness park: Communities in Action National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Population Health and Public Health Practice, Committee on Community-Based Solutions to Promote Health Equity in the United States, 2017-04-27 In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. Communities in Action: Pathways to Health Equity seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

desert healthcare wellness park: Sprawling Cities and Our Endangered Public Health Stephen Verderber, 2012-05-31 Sprawl is an unsustainable pattern of growth that threatens to

undermine the health of communities globally. It has been a dominant mid-to-late twentieth century growth pattern in developed countries and in the twenty-first century has shown widespread signs of proliferation in India, China, and other growing countries. The World Health Organization cites sprawl for its serious adverse public health consequences for humans and ecological habitats. The many adverse impacts of sprawl on the health of individuals, communities, and biological ecosystems are well documented. Architects have been rightly criticized for failing to grasp the aesthetic and functional challenge to create buildings and places that mitigate sprawl while simultaneously promoting healthier, active lifestyles in neighbourhoods and communities. *Sprawling Cities and Our Endangered Public Health* examines the past and present role of architecture in relation to the public health consequences of unmitigated sprawl and the ways in which it threatens our future. Topics examined include the role of twentieth century theories of architecture and urbanism and their public health ramifications, examples of current unsustainable practices, design considerations for the creation of health-promoting architecture and landscape urbanism, a critique of recent case studies of sustainable alternatives to unchecked sprawl, and prognostications for the future. Architects, public health professionals, landscape architects, town planners, and a broad range of policy specialists will be able to apply the methods and tools presented here to counter unmitigated sprawl and to create architecture that promotes active, healthier lifestyles. Stephen Verderber is an internationally respected evidence-based researcher/practitioner/educator in the emerging, interdisciplinary field of architecture, health, and society. This, his latest book on the interactions between our buildings, our cities and our health, is an invaluable reference source for everyone concerned with sustainable architecture and landscape urbanism.

desert healthcare wellness park: Sun Seekers Ananda Pellerin, 2019-01-22 Sunshine and nature: California as a beacon of better health Since the mid-19th century, the idea of California has lured many waves of migrants. Here, writer and editor Lyra Kilston explores a less examined attraction: the region's promise of better health. From ailing families seeking a miracle climate cure to iconoclasts and dropouts pursuing a remedy to societal corruption, the abundance of sunshine and untamed nature around the small but growing Los Angeles area offered them refuge and inspiration. In the wild west of medical practice, eclectic nature-cure treatments gained popularity. The source for this trend can be traced to the mountains and cold-water springs of Europe, where early sanatoriums were built to offer the natural cures of sun, air, water and diet; this sanatorium architecture was exported to the West Coast from Central Europe, and began to impact other types of building. Sun Seekers: The Cure of California constitutes the second volume of The Illustrated America (following 2016's Old Glory), Atelier Éditions' ongoing series excavating America's cultural past. Lyra Kilston is a writer and editor focused on architecture, history, design and urbanism. Her work has appeared in Artforum, Los Angeles Review of Books, Time, Wired and Hyperallergic, among other publications. She was on the curatorial team of Overdrive: LA Constructs the Future, 1940-1990, exhibited at the J. Paul Getty Museum and the National Building Museum.

desert healthcare wellness park: The Pig Book Citizens Against Government Waste, 2013-09-17 The federal government wastes your tax dollars worse than a drunken sailor on shore leave. The 1984 Grace Commission uncovered that the Department of Defense spent \$640 for a toilet seat and \$436 for a hammer. Twenty years later things weren't much better. In 2004, Congress spent a record-breaking \$22.9 billion dollars of your money on 10,656 of their pork-barrel projects. The war on terror has a lot to do with the record \$413 billion in deficit spending, but it's also the result of pork over the last 18 years the likes of: - \$50 million for an indoor rain forest in Iowa - \$102 million to study screwworms which were long ago eradicated from American soil - \$273,000 to combat goth culture in Missouri - \$2.2 million to renovate the North Pole (Lucky for Santa!) - \$50,000 for a tattoo removal program in California - \$1 million for ornamental fish research Funny in some instances and jaw-droppingly stupid and wasteful in others, The Pig Book proves one thing about Capitol Hill: pork is king!

desert healthcare wellness park: The Voices We Carry J. S. Park, 2020-05-05 Reclaim Your Headspace and Find Your One True Voice As a hospital chaplain, J.S. Park encountered hundreds of patients at the edge of life and death, listening as they urgently shared their stories, confessions, and final words. J.S. began to identify patterns in his patients' lives—patterns he also saw in his own life. He began to see that the events and traumas we experience throughout life become deafening voices that remain within us, even when the events are far in the past. He was surprised to find that in hearing the voices of his patients, he began to identify his own voices and all the ways they could both harm and heal. In *The Voices We Carry*, J.S. draws from his experiences as a hospital chaplain to present the Voices Model. This model explores the four internal voices of self-doubt, pride, people-pleasing, and judgment, and the four external voices of trauma, guilt, grief, and family dynamics. He also draws from his Asian-American upbringing to examine the challenges of identity and feeling "other." J.S. outlines how to wrestle with our voices, and even befriend them, how to find our authentic voice in a world of mixed messages, and how to empower those who are voiceless. Filled with evidence-based research, spiritual and psychological insights, and stories of patient encounters, *The Voices We Carry* is an inspiring memoir of unexpected growth, humor, and what matters most. For those wading through a world of clamor and noise, this is a guide to find your clear, steady voice.

This is the first book published in several years, and provides an introduction to the concept and its applications. Written by health/medical geographers and anthropologists, it addresses contemporary applications in the natural and built environments; for special populations, such as substance abusers; and in health care sites, a new and evolving area - and provides an array of critiques or contestations of the concept and its various applications. The conclusion of the work provides a critical evaluation of the development and progress of the concept to date, signposting the likely avenues for future investigation.
