edison wellness medical group edison: Cracking Health Costs Tom Emerick, Al Lewis, 2013-06-07 Cracking Health Costs reveals the best ways for companies and small businesses to fight back, right now, against rising health care costs. This book proposes multiple, practical steps that you can take to control costs and increase the effectiveness of the health benefit. The book is all about rolling back health care costs to save companies and employees money. Working hand-in-hand

with their employees, businesses need to ensure that, whenever feasible, employees with the most expensive diagnoses get optimal treatment at hospitals not practicing “volume-driven” medicine for higher profits. Less than 10% of employees incur 80% of costs. About 20% of patients have been completely misdiagnosed, while many others are simply the victims of surgeons who are either practicing bad medicine or overtreating for profit. For example, some companies, such as Walmart and Lowe’s, are turning to the “Centers of Excellence” approach author Tom Emerick helped to pioneer while running benefits for Walmart. By determining which hospitals are adopting the highest standards of care, benefits managers can reduce the number of unnecessary high-cost surgeries and improve employees’ overall health. The solution-based approach offered by the book is unique, because it can be implemented by businesses today.

O’Leary, 2004 The First 72 Hours is the seminal anthology of the perspectives of public and private sector leaders who came together after September 11, 2001 to design more disaster-resilient communities. Under the umbrella of the Suburban Emergency Management Project, these leaders learned from national experts and one another that all disasters are intensely local at first and that most communities are on their own immediately following disaster impact--often for as long as 72 hours. This new awareness mandated updating strategies to improve disaster preparedness, particularly in light of the threat of terrorism. A wide gamut of perspectives are laid out in the book, including those of doctors and hospitals, city managers, police officers, firefighters, paramedics, American Red Cross volunteers, hospital accreditors, the media, business managers, utility companies, emergency managers, public health officials, academics, and elected public officials. In their own words, these individuals convey the importance of learning how to map the myriad organizations involved in local disaster preparedness and response; analyzing, refining and rehearsing local disaster roles; and getting to know individual personalities when in specific roles. The First 72 Hours is an essential resource for professionals and private citizens alike who want to know what kinds of questions must be asked and answered to better prepare their communities to survive future disaster. There's a special providence in the fall of a sparrow. If it be now, 'tis not to come; if it be not to come, it will be now; if it be not now, yet it will come: the readiness is all.--Hamlet V, II, William Shakespeare

edison wellness medical group edison: Transformative Practices for Minority Student Success Dina C. Maramba, Timothy P. Fong, 2023-07-03 Between 2000 and 2015 the Asian American Pacific Islander population grew from nearly 12 million to over 20 million--at 72% percent recording the fastest growth rate of any major ethnic and racial group in the US. This book, the first to focus wholly on Asian American and Native American Pacific Islander Institutions (AANAPISIs) and their students, offers a corrective to misconceptions about these populations and documents student services and leadership programs, innovative pedagogies, models of community engagement, and collaborations across academic and student affairs that have transformed student outcomes. The contributors stress the importance of disaggregating this population that is composed of over 40 ethnic groups that vary in immigrant histories, languages, religion, educational attainment levels, and socioeconomic status. This book recognizes there is a large population of underserved Asian American and Pacific Islander college students who, given their educational disparities, are in severe need of attention. The contributors describe effective practices that enable instructors to validate the array of students' specific backgrounds and circumstances within the contexts of developing such skills as writing, leadership and cross-cultural communication for their class cohorts as a whole. They demonstrate that paying attention to the diversity of student experiences in the teaching environment enriches the learning for all. The timeliness of this volume is important because of the keen interest across the nation for creating equitable environments for our increasingly diverse students. This book serves as an important resource for predominantly white institutions who are admitting greater numbers of API and other underrepresented students. It also offers models for other minority serving institutions who face similar complexities of multiple national or ethnic groups within their populations, provides ideas and inspiration for the AANAPISI community, and guidance for institutions considering applying for AANAPISI status and funding. This book is for higher education administrators, faculty, researchers, student affairs practitioners, who can learn from AANAPISIs how to successfully engage and teach students with widely differing cultural backgrounds and educational circumstances.

edison wellness medical group edison: The Company Doctor Elaine Draper, 2003-01-30 To limit the skyrocketing costs of their employees' health insurance, companies such as Dow, Chevron, and IBM, as well as many large HMOs, have increasingly hired physicians to supervise the medical care they provide. As Elaine Draper argues in *The Company Doctor*, company doctors are bound by two conflicting ideals: serving the medical needs of their patients while protecting the company's bottom line. Draper analyzes the advent of the corporate physician both as an independent phenomenon, and as an index of contemporary culture, reaching startling conclusions about the intersection of corporate culture with professional autonomy. Drawing on over 100 interviews with company physicians, scientists, and government and labor officials, as well as historical, legal, and statistical sources and medical trade association data, Draper presents an illuminating overview of the social context and meaning of professional work in corporations. Draper finds that while medical journals, speeches, and ethical codes proclaim the independent professional judgment of corporate physicians, the company doctors she interviewed often expressed anguish over the tightrope they must walk between their patients' health and the corporate oversight they face at every turn. Draper dissects the complex position occupied by company doctors to explore broad themes of doctor-patient trust, employee loyalty, privacy issues, and the future direction of medicine. She addresses such controversial topics as drug screening and the difficult position of company doctors when employees sue companies for health hazards in the workplace. Company doctors are but one example of professionals who have at times ceded their autonomy to corporate management. Physicians provide the prototypical professional case for exploring this phenomenon, due to their traditional independence, extensive training, and high levels of prestige. But Draper expands the scope of the book—tracing parallel developments in the law, science, and technology—to draw insightful conclusions about changing conditions in the professional workplace, as corporate cultures everywhere adapt to the new realities of the global economy. *The Company Doctor* provides a compelling examination of the corporatization of American medicine with far-reaching implications for professionals in many other fields.

With a new Afterword covering her trial and sentencing, bringing the story to a close. “Chilling ... Reads like a thriller ... Carreyrou tells [the Theranos story] virtually to perfection.” —The New York Times Book Review In 2014, Theranos founder and CEO Elizabeth Holmes was widely seen as the next Steve Jobs: a brilliant Stanford dropout whose startup “unicorn” promised to revolutionize the medical industry with its breakthrough device, which performed the whole range of laboratory tests from a single drop of blood. Backed by investors such as Larry Ellison and Tim Draper, Theranos sold shares in a fundraising round that valued the company at more than \$9 billion, putting Holmes’s worth at an estimated \$4.5 billion. There was just one problem: The technology didn’t work. Erroneous results put patients in danger, leading to misdiagnoses and unnecessary treatments. All the while, Holmes and her partner, Sunny Balwani, worked to silence anyone who voiced misgivings—from journalists to their own employees.
