encompass massage and wellness clinic: Coming Full Circle Suzanne Crawford O'Brien, 2013-11-01 Coming Full Circle is an interdisciplinary exploration of the relationships between spirituality and health in several contemporary Coast Salish and Chinook communities in western Washington from 1805 to 2005. Suzanne Crawford O'Brien examines how these communities define what it means to be healthy, and how recent tribal community-based health programs have applied this understanding to their missions and activities. She also explores how contemporary definitions, goals, and activities relating to health and healing are informed by Coast Salish history and also by indigenous spiritual views of the body, which are based on an understanding of the relationship between self, ecology, and community. Coming Full Circle draws on a historical framework in reflecting on contemporary tribal health-care efforts and the ways in which they engage indigenous healing traditions alongside twenty-first-century biomedicine. The book makes a strong case for the current shift toward tribally controlled care, arguing that local, culturally distinct ways of healing and understanding illness must be a part of contemporary Native healthcare. Combining in-depth archival research, extensive ethnographic participant-based field work, and skillful scholarship on theories of religion and embodiment, Crawford O'Brien offers an original and masterful analysis of contemporary Native Americans and their worldviews.

encompass massage and wellness clinic: Retooling for an Aging America Institute of Medicine, Board on Health Care Services, Committee on the Future Health Care Workforce for Older Americans, 2008-08-27 As the first of the nation's 78 million baby boomers begin reaching age 65 in 2011, they will face a health care workforce that is too small and woefully unprepared to meet their specific health needs. *Retooling for an Aging America* calls for bold initiatives starting immediately to train all health care providers in the basics of geriatric care and to prepare family members and other informal caregivers, who currently receive little or no training in how to tend to their aging loved ones. The book also recommends that Medicare, Medicaid, and other health plans pay higher rates to boost recruitment and retention of geriatric specialists and care aides. Educators and health professional groups can use *Retooling for an Aging America* to institute or increase formal education and training in geriatrics. Consumer groups can use the book to advocate for improving the care for older adults. Health care professional and occupational groups can use it to improve the quality of health care jobs.

encompass massage and wellness clinic: Wellness Counseling Paul F Granello, 2013-04-09 This is the eBook of the printed book and may not include any media, website access codes, or print supplements that may come packaged with the bound book. Developed by a professor who has been teaching a popular and innovative wellness counseling course for over a decade, this new text is organized into a format specifically designed to meet the needs of both counselor education graduate students and their teachers — making both teaching and learning the material easier and more intuitive. Giving a general but comprehensive overview of the subject of wellness, *Wellness Counseling* offers students a compelling balance of the science and research in the field, the theories that have emerged from this research, and the practical applications that we can take away from practicing these theories. Holistic, scientific, and ultimately concerned with the humanity of counseling, this text strives to be inclusive — especially of the psychological and social aspects of wellness that have gained more attention in recent years. The book is organized in three main sections. While Section One is concerned with the background of wellness as a healthcare paradigm in the United States and major theories of wellness, and historical context for wellness, Section Two contains specific information on the social, physical, emotional, and cognitive domains of wellness. The last main section of the book synthesizes the first two sections of the book to extract practical applications of wellness in behavioral healthcare intervention counseling.

encompass massage and wellness clinic: Relieving Pain in America Institute of Medicine, Board on Health Sciences Policy, Committee on Advancing Pain Research, Care, and Education, 2011-10-26 Chronic pain costs the nation up to \$635 billion each year in medical treatment and lost productivity. The 2010 Patient Protection and Affordable Care Act required the Department of Health and Human Services (HHS) to enlist the Institute of Medicine (IOM) in examining pain as a

public health problem. In this report, the IOM offers a blueprint for action in transforming prevention, care, education, and research, with the goal of providing relief for people with pain in America. To reach the vast multitude of people with various types of pain, the nation must adopt a population-level prevention and management strategy. The IOM recommends that HHS develop a comprehensive plan with specific goals, actions, and timeframes. Better data are needed to help shape efforts, especially on the groups of people currently underdiagnosed and undertreated, and the IOM encourages federal and state agencies and private organizations to accelerate the collection of data on pain incidence, prevalence, and treatments. Because pain varies from patient to patient, healthcare providers should increasingly aim at tailoring pain care to each person's experience, and self-management of pain should be promoted. In addition, because there are major gaps in knowledge about pain across health care and society alike, the IOM recommends that federal agencies and other stakeholders redesign education programs to bridge these gaps. Pain is a major driver for visits to physicians, a major reason for taking medications, a major cause of disability, and a key factor in quality of life and productivity. Given the burden of pain in human lives, dollars, and social consequences, relieving pain should be a national priority.

encompass massage and wellness clinic: Pain Management and the Opioid Epidemic

National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Health Sciences Policy, Committee on Pain Management and Regulatory Strategies to Address Prescription Opioid Abuse, 2017-09-28 Drug overdose, driven largely by overdose related to the use of opioids, is now the leading cause of unintentional injury death in the United States. The ongoing opioid crisis lies at the intersection of two public health challenges: reducing the burden of suffering from pain and containing the rising toll of the harms that can arise from the use of opioid medications. Chronic pain and opioid use disorder both represent complex human conditions affecting millions of Americans and causing untold disability and loss of function. In the context of the growing opioid problem, the U.S. Food and Drug Administration (FDA) launched an Opioids Action Plan in early 2016. As part of this plan, the FDA asked the National Academies of Sciences, Engineering, and Medicine to convene a committee to update the state of the science on pain research, care, and education and to identify actions the FDA and others can take to respond to the opioid epidemic, with a particular focus on informing FDA's development of a formal method for incorporating individual and societal considerations into its risk-benefit framework for opioid approval and monitoring.

encompass massage and wellness clinic: Health Literacy Institute of Medicine, Board on Neuroscience and Behavioral Health, Committee on Health Literacy, 2004-06-29 To maintain their own health and the health of their families and communities, consumers rely heavily on the health information that is available to them. This information is at the core of the partnerships that patients and their families forge with today's complex modern health systems. This information may be provided in a variety of forms — ranging from a discussion between a patient and a health care provider to a health promotion advertisement, a consent form, or one of many other forms of health communication common in our society. Yet millions of Americans cannot understand or act upon this information. To address this problem, the field of health literacy brings together research and practice from diverse fields including education, health services, and social and cultural sciences, and the many organizations whose actions can improve or impede health literacy. Health Literacy: Prescription to End Confusion examines the body of knowledge that applies to the field of health literacy, and recommends actions to promote a health literate society. By examining the extent of limited health literacy and the ways to improve it, we can improve the health of individuals and populations.

encompass massage and wellness clinic: Bridging The Gap: Integrative Oncology And The Practice Of Traditional Chinese Medicine Bianca Di Giulio, James Munson, 2020-08-24 The book's inherent value, currently, is in its uniqueness. There are few books on Integrative Oncology (IO). There are few books on the entirety of traditional Chinese medicine in the treatment of cancer. There are even fewer, if any, books that deal with the topics of Integrative Oncology and the use of traditional Chinese medicine as a whole in the treatment of people with cancer. While very broad and deep topics, this makes for a varied audience of interest that includes not just the TCM practitioner or student, but Western health practitioners and patients as well as laypeople interested in the topic of oncology. For those interested in the topic of IO, it gives one of the few non-biased, honest and critical views of the state of IO in contrast to what is promoted by various institutions and societies. For the Western health practitioner and/or patient, many of whom are completely unfamiliar with TCM and how it works or can be used, it provides information on the breadth of TCM and how it can be applied in various ways to help improve outcomes. For the TCM practitioner or student, it provides much needed information on how to go about caring for a patient with cancer to include clinical pearls and important Western medical information and terminology.

encompass massage and wellness clinic: Wall Disease Jessica Wapner, 2020-10-06 We build border walls to keep danger out. But do we understand the danger posed by walls themselves? East Germans were the first to give the crisis a name: Mauerkrankheit, or “wall disease.” The afflicted—everyday citizens living on both sides of the Berlin wall—displayed some combination of depression, anxiety, excitability, suicidal ideation, and paranoia. The Berlin Wall is no more, but today there are at least seventy policed borders like it. What are they doing to our minds? Jessica Wapner investigates, following a trail of psychological harm around the world. In Brownsville, Texas, the hotly contested US-Mexico border wall instills more feelings of fear than of safety. And in eastern Europe, a Georgian grandfather pines for his homeland—cut off from his daughters, his baker, and his bank by the arbitrary path of a razor-wire fence built in 2013. Even in borderlands riven by conflict, the same walls that once offered relief become enduring reminders of trauma and helplessness. Our brains, Wapner writes, devote “border cells” to where we can and cannot go safely—so, a wall that goes up in our town also goes up in our minds. Weaving together interviews with those living up against walls and expert testimonies from geographers, scientists, psychologists, and other specialists, she explores the growing epidemic of wall disease—and illuminates how neither those “outside” nor “inside” are immune.

encompass massage and wellness clinic: WHO Guidelines on Hand Hygiene in Health Care World Health Organization, 2009 The WHO Guidelines on Hand Hygiene in Health Care provide health-care workers (HCWs), hospital administrators and health authorities with a thorough review of evidence on hand hygiene in health care and specific recommendations to improve practices and reduce transmission of pathogenic microorganisms to patients and HCWs. The present Guidelines are intended to be implemented in any situation in which health care is delivered either to a patient or to a specific group in a population. Therefore, this concept applies to all settings where health care is permanently or occasionally performed, such as home care by birth attendants. Definitions of health-care settings are proposed in Appendix 1. These Guidelines and the associated WHO Multimodal Hand Hygiene Improvement Strategy and an Implementation Toolkit (<http://www.who.int/gpsc/en/>) are designed to offer health-care facilities in Member States a conceptual framework and practical tools for the application of recommendations in practice at the bedside. While ensuring consistency with the Guidelines recommendations, individual adaptation

according to local regulations, settings, needs, and resources is desirable. This extensive review includes in one document sufficient technical information to support training materials and help plan implementation strategies. The document comprises six parts.
