frisco health and wellness: *Promoting Health and Academic Success* David A. Birch, Donna M. Videto, 2015-02-17 There is increasing evidence that health and academic success go hand in hand. Now educators and health professionals have a new model—the Whole School, Whole Community, Whole Child (WSCC) approach—to use in promoting health and learning in the schools. This new approach, developed by leaders in education and health, is a transition from the coordinated school health (CSH) model that was introduced in 1987. *Promoting Health and Academic Success* is a new resource for the transition from CSH to WSCC. Written by national leaders in education and school health, some of whom were involved in the development of WSCC, this book provides direction for education and school health professionals interested in promoting student health. It is valuable for individuals and groups interested in advocating for WSCC and for those engaged in the planning, implementation, and evaluation of this new approach. The book also is a resource for both undergraduate and graduate students in courses that address a coordinated approach to school health. Each chapter includes application activities that engage students in translating their learning in the context of WSCC simulations. In addition, the School Health in Action feature provides case studies that demonstrate the impact school health programs are having in schools across the United States. Applicable to both students and professionals, *Promoting Health and Academic Success* includes an appendix that presents a thorough guide to using school health assessment tools created by organizations such as the Centers for Disease Control and Prevention, Association for Supervision and Curriculum Development, and the National Association of State Boards of Education. Following is a partial listing of the tools: • The School Health Index helps schools improve health and safety policies. • The State Schools Health Policy Database facilitates sharing of policies across states. • The Health Education Curriculum Analysis Tool encourages children to adopt and maintain health-enhancing behaviors. • The Physical Education Curriculum Analysis Tool assists schools in analyzing their curricula and comparing it to national physical education standards. • A Parent Engagement tool shares strategies for involving parents in school health. The book is presented in

five parts. Part I unveils the new WSCC model, explains its components, and provides a historical overview of coordinated school health. Part II offers insights into the Whole Child initiative and examines the evidence linking health and academic success. Part III explores the crucial role of school administration in ensuring success, ways to meet the diverse needs of students and their families, and methods for getting the community involved. Part IV delves into planning, implementation, and evaluation aspects of WSCC. Part V looks to the future for WSCC and provides perspectives from the field. The appendix supplies the assessment instruments and tools.

frisco health and wellness: Governing Bodies Rachel Louise Moran, 2018-04-17
Americans are generally apprehensive about what they perceive as big government—especially when it comes to measures that target their bodies. Soda taxes, trans fat bans, and calorie counts on menus have all proven deeply controversial. Such interventions, Rachel Louise Moran argues, are merely the latest in a long, albeit often quiet, history of policy motivated by economic, military, and familial concerns. In *Governing Bodies*, Moran traces the tension between the intimate terrain of the individual citizen's body and the public ways in which the federal government has sought to shape the American physique over the course of the twentieth century. Distinguishing her subject from more explicit and aggressive government intrusion into the areas of sexuality and reproduction, Moran offers the concept of the advisory state—the use of government research, publicity, and advocacy aimed at achieving citizen support and voluntary participation to realize social goals. Instituted through outside agencies and glossy pamphlets as well as legislation, the advisory state is government out of sight yet intimately present in the lives of citizens. The activities of such groups as the Civilian Conservation Corps, the Children's Bureau, the President's Council on Physical Fitness, and the Special Supplemental Nutrition Program for Women, Infants, and Children (WIC) implement federal body projects in subtle ways that serve to mask governmental interference in personal decisions about diet and exercise. From advice-giving to height-weight standards to mandatory nutrition education, these tactics not only empower and conceal the advisory state but also maintain the illusion of public and private boundaries, even as they become blurred in practice. Weaving together histories of the body, public policy, and social welfare, Moran analyzes a series of discrete episodes to chronicle the federal government's efforts to shape the physique of its citizenry. *Governing Bodies* sheds light on our present anxieties over the proper boundaries of state power.

frisco health and wellness: *Oola for Women* Troy Amdahl, Dave Braun, 2017-05-02 If you haven't heard of the 'Oola phenomenon' yet, it's time to catch up. First, though, you need to understand what it is: Oola is that state of awesomeness you experience when your life is balanced and growing in all the key areas of health and well-being. It can be a noun or a verb. It can be a destination or a feeling. It can be as complex as a life growing and balanced in fitness, finance, family, field, faith, friends, and fun (the 7 F's of Oola), or as simple as a sunset, a quiet book on the beach, or a special moment with a child. It is that place we all shoot for in life. That feeling we experience and that we celebrate in our successes along the way. In short, Oola is cool. Since the first copy of the original book, *Oola: Find balance in an Unbalanced World*, rolled off the presses a few years ago, the Oola Lifestyle has become a literal phenomenon—a dynamic movement. OolaPalooza live events have been routinely sold out since the day they were started, and the Oola message has been taken to countless cities across America and to every major city in the world via 700,000+ Oola fans on social media. In their 1970s VW Surf bus, authors Troy Amdahl and Dave Braun have taken their OolaDream tour on the road, from coast-to-coast, collecting dreams and goals for a balanced life from people who adorn their vehicle with colorful Oola stickers. The OolaGuys know that women are the ultimate multitaskers. While a circus performer might spin seven plates in a single show, women spin seven plates—figuratively—every day. They not only juggle kids, family, and home life, they also juggle work responsibilities, customers and clients, make constant business decisions, handle professional events and so many related activities that it's truly mind-boggling how much a woman can pack into a 24-hour day. In this Oola especially for them, the book shows, through the experiences of 54 inspiring women, how to overcome unexpected hardships, and transform the juggling act of everyday life into a dream lifestyle of simplicity, tranquility, abundance, and opportunity. That's what 'living Oola' means—and it's not only an attainable goal, but a well-deserved reward.

frisco health and wellness: *Next Medicine* Walter Bortz, MD, 2011-01-03 Every year, the average American spends about \$7,300 on medical expenses. The typical Canadian pays \$2,700, the Briton only \$2,000. And yet, according to the World Health Organization, our healthcare system, in terms of total quality, ranks thirty-eighth in the world, right between Costa Rica and Slovenia. Not

only do 40 million Americans lack health insurance, but more than 200,000 die each year because of medical mistakes. Our average life expectancy is lower than Cuba's. In *Next Medicine*, Dr. Walter Bortz zeroes in on why the American medicine is spiraling toward disaster. A physician with fifty years of experience and a leading authority on aging, Bortz argues that the financial interests of biotech and drug companies have distorted the healthcare system. Thanks to them, medicine today is economically motivated to treat disease rather than to prevent it. Heart disease, for example, is widely treated with drug interventions and invasive surgery--both of which are extravagantly profitable for pharmaceutical giants and hospitals. Daily exercise and a healthy diet, on the other hand, can prevent heart disease, and can be obtained by patients essentially for free--but there's no money in that. The medical-industrial complex has a vested interest in keeping us sick, and until that changes medicine will fail to effectively address the leading cause of disability and mortality today: chronic diseases like diabetes that are largely preventable. Bortz proposes a medical system that emphasizes personal responsibility and provides incentives for healthy lifestyle choices, along with new training for medical professionals. Through a lively narrative full of personal anecdotes and jarring statistics, Bortz makes a powerful case for a radically new medical system--one that is based on rigorous science and loosens the strangle hold of corporate interests on American health.

frisco health and wellness: *The Heartfulness Way* Kamlesh D. Patel, Joshua Pollock, 2018-06-01 "A must-read for anyone interested in incorporating meditation into their lifestyle." --Sanjay Gupta, MD, chief medical correspondent for CNN Heartfulness is an ideal, a spiritual way of living by and from the heart that is inclusive of all ideologies, beliefs, and religions. In this heart-centered book, a student in conversation with his teacher, Kamlesh D. Patel--affectionately known as Daaji, the fourth and current spiritual guide of the century-old Heartfulness tradition--present a unique method of meditation with the power to facilitate an immediate, tangible spiritual experience, irrespective of a person's faith. Our modern, fast-paced world can be an overwhelming place. Every day, we're bombarded with messages telling us that in order to be happy, fulfilled, and worthy, we must be better, do more, and accumulate as much material wealth as possible. Most of us move through our busy lives with our minds full of these ideas, multitasking as we strive to navigate the responsibilities and expectations we must meet just to make it through the day. But what if there is another way? What if, rather than letting the busyness of life overtake our minds, we learn to be heartfelt instead? Based on Daaji's own combination of approaches and practices for the modern seeker--which draws from the teachings of Sahaj Marg, meaning "Natural Path"--Heartfulness is a contemporized version of the ancient Indian practice of Raja Yoga, a tradition that enables the practitioner to realize the higher Self within. While many books describe refined states of being, *The Heartfulness Way* goes further, providing a pragmatic course to experience those states for oneself, which, per the book's guiding principle, is "greater than knowledge." Heartfulness meditation consists of four elements--relaxation, meditation, cleaning, and prayer--and illuminates the ancient, defining feature of yogic transmission (or pranahuti), the utilization of divine energy for spiritual growth and transformation. Using the method, detailed practices, tips, and practical philosophy offered in this book, you'll reach new levels of attainment and learn to live a life more deeply connected to the values of the Heartfulness way--with acceptance, humility, compassion, empathy, and love.

frisco health and wellness: Vibrant and Healthy Kids National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Population Health and Public Health Practice, Committee on Applying Neurobiological and Socio-Behavioral Sciences from Prenatal Through Early Childhood Development: A Health Equity Approach, 2019-12-27 Children are the foundation of the United States, and supporting them is a key component of building a successful future. However, millions of children face health inequities that compromise their development, well-being, and long-term outcomes, despite substantial scientific evidence about how those adversities contribute to poor health. Advancements in neurobiological and socio-behavioral science show that critical biological systems develop in the prenatal through early childhood periods, and neurobiological development is extremely responsive to environmental influences during these stages. Consequently, social, economic, cultural, and environmental factors significantly affect a child's health ecosystem and ability to thrive throughout adulthood. Vibrant and Healthy Kids: Aligning Science, Practice, and Policy to Advance Health Equity builds upon and updates research from Communities in Action: Pathways to Health Equity (2017) and From Neurons to Neighborhoods: The Science of Early Childhood Development (2000). This report provides a brief overview of stressors that affect childhood development and health, a framework for applying current brain and development science to the real world, a roadmap for implementing tailored interventions, and recommendations about improving systems to better align with our understanding of the significant impact of health equity.

frisco health and wellness: Preventive Dermatology Robert A. Norman, 2010-06-25 In his latest book, Dr. Robert A. Norman introduces us to the intriguing concept of preventive

dermatology. Although dermatologists have long been patient advocates and have stressed vigorously on the importance of sun avoidance and protection, there is still much more that we can do to prevent disease. Dr. Norman and his skilled coterie of collaborators discuss two distinct types of prevention in dermatology: the prevention of skin diseases and the prevention of systemic disorders, some with only very indirect connections to the skin. The first is fairly well known to dermatologists; the second is truly an emerging concept of great importance. Educational efforts to prevent or at least control skin disease may range from the proper use of sunscreens to weight loss in psoriatic patients, the avoidance of trigger factors in rosacea, proper skin care in atopic dermatitis, or adoption of a low-fat diet to decrease the incidence of actinic keratosis and nonmelanoma skin cancer. Another good example is the use of vaccines to protect against diseases such as herpes zoster and genital HPV infection in females.
