imperial heights healthcare and wellness centre photos: Sociomedical Perspectives on Patient Care Jeffrey M. Clair, Richard M. Allman, 1993-08-10 Social change has placed new demands on the practice of medicine, altering almost every aspect of patient care relationships. Just as medicine was encouraged to embrace the biological sciences some 100 years ago, recent directives indicate the importance of the social sciences in understanding biomedical practice. Humanistic

challenges call for changes in curative and technological imperatives. In this book, social scientists contribute to such challenges by using social evidence to indicate appropriate new goals for health care in a changing environment. This book was designed to stimulate and challenge all those concerned with the human interactions that constitute medical practice. To encompass a wide range of topics, the authors include researchers; practicing physicians from the specialties of family, general, geriatric, pediatric, and oncological medicine; social and behavioral scientists; and public health representatives. Cutting across disciplinary boundaries, they explore the ethical, economic, and social aspects of patient care. These essays draw on past studies of the patient-doctor relationship and generate new and important questions. They address social behavior in patient care as a way to approach theoretical issues pertinent to the social and medical sciences. The authors also use social variables to study patient care and suggest new areas of sociomedical inquiry and new approaches to medical practice, education, and research. Its cross-disciplinary approach and jargon-free writing make this book an important and accessible tool for physician, scholar, and student.

imperial heights healthcare and wellness centre photos: Equity by Design Mirko Chardin, Katie Novak, 2020-07-20 Our calling is to drop our egos, commit to removing barriers, and treat our learners with the unequivocal respect and dignity they deserve. --Mirko Chardin and Katie Novak When it comes to the hard work of reconstructing our schools into places where every student has the opportunity to succeed, Mirko Chardin and Katie Novak are absolutely convinced that teachers should serve as our primary architects. And by teachers they mean legions of teachers working in close collaboration. After all, it's teachers who design students' learning experiences, who build student relationships . . . who ultimately have the power to change the trajectory of our students' lives. Equity by Design is intended to serve as a blueprint for teachers to alter the all-too-predictable outcomes for our historically under-served students. A first of its kind resource, the book makes the critical link between social justice and Universal Design for Learning (UDL) so that we can equip students (and teachers, too) with the will, skill, and collective capacity to enact positive change. Inside you'll find: Concrete strategies for designing and delivering a culturally responsive, sustainable, and equitable framework for all students Rich examples, case studies, and implementation spotlights of educators, students (including Parkland survivors), and programs that have embraced a social justice imperative Evidence-based application of best practices for UDL to create more inclusive and equitable classrooms A flexible format to facilitate use with individual teachers, teacher teams, and as the basis for whole-school implementation Every student, Mirko and Katie insist, deserves the opportunity to be successful regardless of their zip code, the color of their skin, the language they speak, their sexual and/or gender identity, and whether or not they have a disability. Consider Equity by Design a critical first step forward in providing that all-important opportunity. imperial heights healthcare and wellness centre photos: Architects' Data Ernst Neufert, Peter Neufert, 1991-01-15 This is an essential aid in the initial design and planning of a project. The relevant building type is located by a comprehensive index and cross reference system, a condensed commentary covers user requirements, planning criteria, basic dimensions and other considerations of function, siting aspect etc. A system of references based on an extensive bibliography supports the text. In every section plans, sections, site layouts, design details and graphs illustrated key aspects of a building type's design. Most illustrations are dimensioned or scaled - the metric system of measurement is used throughout, and the equivalent in feet/inches can easily be read either off a graphic scale on the page or from the built-in conversion table. The

illustrations are international in origin and include both well know and less famous designers. Architects Data is primarily a handbook of building types rather than of construction techniques and details. However its treatment of components (such as doors and windows) and of spaces for building services is extremely thorough, since consideration of this data is an essential element of the planning process. The opening pages of basic data on man and his buildings cover critical subjects such as scale, drawing practice, noise, light and space for the same reason. Particular attention has also been paid to the implications of energy conservation, means of escape from fire and the needs of the elderly and the disabled.

imperial heights healthcare and wellness centre photos: *Caring for vulnerable babies* Great Britain: National Audit Office, 2007-12-19 This NAO report examines the reorganisation of neonatal services in England, and has set out a number of facts in regard of baby births. In 2006, 635,748 babies were born in England, with 62,471 babies, approximately 10% of all births admitted to neonatal units. Babies require neonatal care because they are premature, have a low birth weight or suffer from illness or a condition, such as a heart defect. The NAO also states that there is a trend in low weight babies increasing in the UK and other developed countries. Premature babies are the result of a number of factors, including maternal age, obesity, smoking, ethnic origin, deprivation and assisted conception such as IVF. Also, the number of women giving birth at 40 years of age or more has more than doubled since 1986. The NAO has set out a number of findings and recommendations, including: that there is a widespread support for neonatal services to be delivered through managed clinical networks, but these networks have evolved at different rates; most clinical networks have made progress in reducing long-distance transfers, but only half provide specialist transport services 24 hours a day, seven days a week; that there has been an improvement in communication between clinical networks; that there are still capacity problems that undermine the effectiveness and efficiency of neonatal care, and that this is often due to a shortage of nurses; that a greater account should be taken of parent's needs when neonatal care is required, such as

communication with medical staff, information about the babies' care and accommodation for the parents; the costs of neonatal services are not fully understood, and there is a mismatch between costs and charges.

imperial heights healthcare and wellness centre photos: A Pattern Language Christopher Alexander, 2018-09-20 You can use this book to design a house for yourself with your family; you can use it to work with your neighbors to improve your town and neighborhood; you can use it to design an office, or a workshop, or a public building. And you can use it to guide you in the actual process of construction. After a ten-year silence, Christopher Alexander and his colleagues at the Center for Environmental Structure are now publishing a major statement in the form of three books which will, in their words, lay the basis for an entirely new approach to architecture, building and planning, which will we hope replace existing ideas and practices entirely. The three books are *The Timeless Way of Building*, *The Oregon Experiment*, and this book, *A Pattern Language*. At the core of these books is the idea that people should design for themselves their own houses, streets, and communities. This idea may be radical (it implies a radical transformation of the architectural profession) but it comes simply from the observation that most of the wonderful places of the world were not made by architects but by the people. At the core of the books, too, is the point that in designing their environments people always rely on certain languages, which, like the languages we speak, allow them to articulate and communicate an infinite variety of designs within a forma system which gives them coherence. This book provides a language of this kind. It will enable a person to make a design for almost any kind of building, or any part of the built environment. Patterns, the units of this language, are answers to design problems (How high should a window sill be? How many stories should a building have? How much space in a neighborhood should be devoted to grass and trees?). More than 250 of the patterns in this pattern language are given: each consists of a problem statement, a discussion of the problem with an illustration, and a solution. As the authors say in their introduction, many of the patterns are archetypal, so deeply rooted in the nature of things that it seems likely that they will be a part of human nature, and human action, as much in five hundred years as they are today.

Rowe, Limin Hee, 2019-08-30 This open access book highlights Singapore's development into a city in which water and greenery, along with associated environmental, technical, social and political aspects have been harnessed and cultivated into a liveable sustainable way of life. imperial heights healthcare and wellness centre photos: Singapore's Health Care System K. E. T. Al SATKU, 2015-11-13 How did Singapore's health care system transform itself into one of the best in the world? It not only provides easy access, but its standards of health care, not only in curative medicine but also in prevention, are exemplary. Fifty years ago, the infant mortality rate (IMR) was 26 per thousand live births; today the IMR is 2. Life expectancy was 64 years then; today, it is 83. The Singapore Medicine brand is trusted internationally, and patients are drawn to Singapore from all over the world. And while many countries struggle to finance their health care, Singapore has developed a health care financing framework that makes health care affordable for its people and gives sustainability to the health care system. Reliability is provided by a professional workforce that seeks to continually learn, improve and become ever more proficient with cutting edge technology while emphasizing the relational aspects of health care by nurturing compassion and maintaining high standards of integrity. Convenience and safety are enhanced by a unifying IT system that enables the portability of medical records across health care institutions. All these have been achieved not by chance but by careful planning, strong leadership and dedicated people who are prepared to learn from Singapore's own experience while adapting best practices from around the world. But the system is not without challenges -- not least those of an aging population, and an increasing market influence. This book provides a fascinating insight into the development of Singapore's health care system from the early days of fighting infections and providing nutrition supplementation for school children, to today's management of lifestyle diseases and high-end tertiary care. It also discusses how the system must adapt to help Singaporeans continue to live well, live long, and with peace of mind.--

Studies show that the vast majority of medical and nursing students watch popular medical television dramas and comedies such as Grey's Anatomy, ER, House M.D. and Scrubs. This affords us with a unique opportunity to engage and inform not only students but the general public and patients further downstream. This volume analyses examples of medical-themed popular culture and offers various strategies and methods for educators in this field to integrate this material into their teaching. The result is a fascinating read and original resource for medical professionals and teachers alike.

imperial heights healthcare and wellness centre photos: Killing from the Inside Out Robert Emmet Meagher, 2014-09-15 Armies know all about killing. It is what they do, and ours does it more effectively than most. We are painfully coming to realize, however, that we are also especially good at killing our own from the inside out, silently, invisibly. In every major war since Korea, more of our veterans have taken their lives than have lost them in combat. The latest research, rooted in veteran testimony, reveals that the most severe and intractable PTSD--fraught with shame, despair, and suicide--stems from moral injury. But how can there be rampant moral injury in what our military, our government, our churches, and most everyone else call just wars? At

the root of our incomprehension lies just war theory--developed, expanded, and updated across the centuries to accommodate the evolution of warfare, its weaponry, its scale, and its victims. Any serious critique of war, as well any true attempt to understand the profound, invisible wounds it inflicts, will be undermined from the outset by the unthinking and all-but-universal acceptance of just war doctrine. Killing from the Inside Out radically questions that theory, examines its legacy, and challenges us to look beyond it, beyond just war.

imperial heights healthcare and wellness centre photos: The Shape of Green Lance Hosey, 2012-06-11 Does going green change the face of design or only its content? The first book to outline principles for the aesthetics of sustainable design, The Shape of Green argues that beauty is inherent to sustainability, for how things look and feel is as important as how they're made. In addition to examining what makes something attractive or emotionally pleasing, Hosey connects these questions with practical design challenges. Can the shape of a car make it more aerodynamic and more attractive at the same time? Could buildings be constructed of porous materials that simultaneously clean the air and soothe the skin? Can cities become verdant, productive landscapes instead of wastelands of concrete? Drawing from a wealth of scientific research, Hosey demonstrates that form and image can enhance conservation, comfort, and community at every scale of design, from products to buildings to cities. Fully embracing the principles of ecology could revolutionize every aspect of design, in substance and in style. Aesthetic attraction isn't a superficial concern — it's an environmental imperative. Beauty could save the planet.

imperial heights healthcare and wellness centre photos: Geriatric Dermatology R.A. Norman, 2020-08-26 Over the past few years the world's population has continued on its remarkable transition from a state of high birth and death rates to one characterized by low birth and death rates. Consequently, primary care physicians and dermatologists will see more elderly patients presenting age-related dermatological conditions. There has never been a better time for a book devoted entirely to skin care in the elderly. Geriatric Dermatology draws together a panel of experts who provide an overview of the diagnosis and treatment of geriatric skin diseases. It begins with a general review of the aging of the world's population and the major dermatological problems that often arise in elderly patients. An added benefit is the book's coverage of geriatric skin care in nursing homes, adult congregate living, and subacute and home health settings, a subject not always found in conventional dermatology texts. The book includes: A summary of the dermatological disorders frequently encountered in the elderly, including eczematous dermatitis, skin infections, and neoplasias A description of the most common geriatric hair and scalp disorders, including graying, alopecia, and scalp psoriasis Comprehensive coverage of the diagnosis and treatment of leg, foot, and nail diseases Detailed discussion of the treatment of superficial mycoses, scabies, and pediculosis Less common geriatric conditions such as blistering diseases Major adverse drug reactions on the skin Leg ulcers due to venous insufficiency, arterial diseases, and diabetic nephropathy Diagnosis and treatment of diabetic complications of dermatology, such scleroderma and dermopathy The study of diseases that impact the elderly population is a crucial and growing area of interest in medicine. Geriatricians, primary care physicians, dermatologists, and others involved in the care of the elderly will inevitably see an increase in skin diseases specific to aging. The comprehensive coverage provided by Geriatric Dermatology facilitates the diagnosis and management of these geriatric skin diseases from the common to the rare and unusual.
