accounting nyu: Coal, Cages, Crisis Judah Schept, 2022-04-12 How prisons became economic development strategies for rural Appalachian communities As the United States began the project of mass incarceration, rural communities turned to building prisons as a strategy for economic development. More than 350 prisons have been built in the U.S. since 1980, with certain regions of the country accounting for large shares of this dramatic growth. Central Appalachia is one such region; there are eight prisons alone in Eastern Kentucky. If Kentucky were its own country, it would have the seventh highest incarceration rate in the world. In Coal, Cages, Crisis, Judah Schept takes a closer look at this stunning phenomenon, providing insight into prison growth, jail expansion and rising incarceration rates in America's hinterlands. Drawing on interviews, site visits, and archival research, Schept traces recent prison growth in the region to the rapid decline of its coal industry. He takes us inside this startling transformation occurring in the coalfields, where prisons are often built on top of old coalmines, including mountaintop removal sites, and built into community planning approaches to crises of unemployment, population loss, and declining revenues. By linking prison growth to other sites in this landscape—coal mines, coal waste, landfills, and incinerators—Schept shows that the prison boom has less to do with crime and punishment and much more with the overall extraction, depletion, and waste disposal processes that characterize dominant development strategies for the region. Schept argues that the future of this area now hangs in the balance, detailing recent efforts to oppose its carceral growth. Coal, Cages, Crisis offers invaluable insight into the complex dynamics of mass incarceration that continue to shape Appalachia and the broader United States.

was still to be resolved, they are now among the most respected professional schools in the university community. In recent decades, this increase in prestige has been matched by the growth of both Bachelor's and MBA programs. The forces and events shaping this dramatic rise in importance have been recounted by Dean Emeritus of New York University's Stern School of Business, Abraham L. Gitlow. He brings his 45 years of experience as a faculty member at the Stern School to bear as he analyzes the educational and philosophical issues and tensions that marked the history of the school, and of American higher education in general, in the twentieth century.

accounting nyu: The Great Reversal Thomas Philippon, 2019-10-29 A Financial Times Book of the Year A ProMarket Book of the Year "Superbly argued and important...Donald Trump is in so many ways a product of the defective capitalism described in The Great Reversal. What the U.S. needs, instead, is another Teddy Roosevelt and his energetic trust-busting. Is that still imaginable? All believers in the virtues of competitive capitalism must hope so." —Martin Wolf, Financial Times "In one industry after another...a few companies have grown so large that they have the power to keep prices high and wages low. It's great for those corporations—and bad for almost everyone else." —David Leonhardt, New York Times "Argues that the United States has much to gain by reforming how domestic markets work but also much to regain—a vitality that has been lost since the Reagan years...His analysis points to one way of making America great again: restoring our free-market competitiveness." —Arthur Herman, Wall Street Journal Why are cell-phone plans so much more expensive in the United States than in Europe? It seems a simple question, but the search for an answer took one of the world's leading economists on an unexpected journey through some of the most hotly debated issues in his field. He reached a surprising conclusion: American markets, once a model for the world, are giving up on healthy competition. In the age of Silicon Valley start-ups and millennial millionaires, he hardly expected this. But the data from his cutting-edge research proved undeniable. In this compelling tale of economic detective work, we follow Thomas Philippon as he works out the facts and consequences of industry concentration, shows how lobbying and campaign contributions have defanged antitrust regulators, and considers what all this means. Philippon argues that many key problems of the American economy are due not to the flaws of capitalism or globalization but to the concentration of corporate power. By lobbying

against competition, the biggest firms drive profits higher while depressing wages and limiting opportunities for investment, innovation, and growth. For the sake of ordinary Americans, he concludes, government needs to get back to what it once did best: keeping the playing field level for competition. It's time to make American markets great—and free—again.

accounting nyu: The Masses Are Revolting Zachary Samalin, 2021-09-15 The Masses Are Revolting reconstructs a pivotal era in the history of affect and emotion, delving into an archive of

nineteenth-century disgust to show how this negative emotional response came to play an outsized, volatile part in the emergence of modern British society. Attending to the emotion's socially productive role, Zachary Samalin highlights concrete scenes of Victorian disgust, from sewer tunnels and courtrooms to operating tables and alleyways. Samalin focuses on a diverse set of nineteenth-century writers and thinkers—including Charles Darwin, Charles Dickens, Karl Marx, Friedrich Engels, Thomas Hardy, George Gissing, and Charlotte Brontë—whose works reflect on the shifting, unstable meaning of disgust across the period. Samalin elaborates this cultural history of Victorian disgust in specific domains of British society, ranging from the construction of London's sewer system, the birth of modern obscenity law, and the development of the conventions of literary realism to the emergence of urban sociology, the rise of new scientific theories of instinct, and the techniques of colonial administration developed during the Indian Rebellion of 1857. By bringing to light disgust's role as a public passion, *The Masses Are Revolting* reveals significant new connections among these apparently disconnected forms of social control, knowledge production, and infrastructural development.
