owen accounting: Profit First Mike Michalowicz, 2017-02-21 Author of cult classics The Pumpkin Plan and The Toilet Paper Entrepreneur offers a simple, counterintuitive cash management solution that will help small businesses break out of the doom spiral and achieve instant profitability. Conventional accounting uses the logical (albeit, flawed) formula: Sales - Expenses = Profit. The problem is, businesses are run by humans, and humans aren't always logical. Serial entrepreneur Mike Michalowicz has developed a behavioral approach to accounting to flip the formula: Sales - Profit = Expenses. Just as the most effective weight loss strategy is to limit portions by using smaller plates, Michalowicz shows that by taking profit first and apportioning only what remains for expenses, entrepreneurs will transform their businesses from cash-eating monsters to profitable cash cows. Using Michalowicz's Profit First system, readers will learn that: · Following 4 simple principles can simplify accounting and make it easier to manage a profitable business by looking at

bank account balances. · A small, profitable business can be worth much more than a large business surviving on its top line. · Businesses that attain early and sustained profitability have a better shot at achieving long-term growth. With dozens of case studies, practical, step-by-step advice, and his signature sense of humor, Michalowicz has the game-changing roadmap for any entrepreneur to make money they always dreamed of.

owen accounting: The Sustainability Curriculum Cedric Cullingford, John Blewitt, 2013 The links between education and sustainable development are deepening, although subject to much controversy and debate. The success of the sustainability discourse depends both on the pedagogic and research functions of higher education. Similarly, for higher education itself to remain relevant and engaged it faces pressure not only to integrate the insights and lessons drawn from the perspective of sustainable development, but also to be responsive to scrutiny of its own practices in relation to sustainability. Among professionals in higher education, sustainable development has its supporters and detractors. It is embraced by some individuals and departments while being perceived by others as a threat to the coherence of particular disciplines. Although it is not currently an academic discipline in its own right, increasing public and professional familiarity with the term, and the increasing urgency of global calls for the implementation of sustainable development mean that this is rapidly changing. This volume analyses the impact of the concepts and practices of sustainability and sustainable development on various academic disciplines, institutional practices, fields of study and methods of enquiry. The contributors, drawn from a wide-range of disciplines, perspectives, educational levels and institutional contexts, examine the purpose of the modern university and the nature of sustainable education, which includes exploring links to social movements for sustainability projects, curriculum change, culture and biodiversity, values relating to gender equality and global responsibility, and case studies on the transformation, or otherwise, of some specific disciplines.

The book incorporates an ethical dimension in making these assessments. Its focus is a conceptual, theoretical one drawing on classical philosophy, the sociology of professions, economic theory, and the public interest dimension of accountants as professionals. The authors of papers are long-time contributors to the annual symposium on Research in Accounting Ethics sponsored by the Public Interest Section of the AAA.

owen accounting: *Accountability, Philosophy and the Natural Environment* Glen Lehman, 2021-02-28 Using a philosophical and interdisciplinary approach, this book looks at how accountability can provide solutions to our current environmental and global political problems. When a social system has external elements imposed upon it, or presented to it, political problems are likely to emerge. This book demonstrates that what is needed are connecting social elements with a natural affinity to bring people together despite their differences. This book is different from others in the field. It provides new insights by critiquing the extant understandings of accountability and expands the possibilities by building on Charles Taylor's philosophies. Central to the argument of the book are perspectives on authenticity and expressivism which are found to provide a radical reworking of our understanding of being in the world, and a starting point for rethinking the way individuals and communities ought to be dealing politically with accountability and ecological crises. The argument builds to an accountability perspective that utilises work from interpretivism, liberalism, and postmodern theory. The book will be of interest to researchers in environmental philosophy, critical perspectives on accounting, corporate governance, corporate social reporting, and environmental accounting.

owen accounting: Modernization and Accountability in the Social Economy Sector Ferreira, Augusta, Marques, Rui, Azevedo, Graça, Inácio, Helena, Santos, Carlos, 2019-05-31 The social economy sector (SES) faces pressures for greater accountability to their funders, users, and citizens, and a growing need to report good practices in the social, economic, and financial impact that they have on the community. However, these entities often face difficulties related to the lack of an accounting framework that allows them to properly disseminate the results of their activities. Thus, practices that involve financial reporting and an assessment of their social, economic, and financial impact are needed to improve their accountability, sustainability, and operational performance. *Modernization and Accountability in the Social Economy Sector* is an essential reference source that discusses future avenues of development for the management of SES entities, accounting, control in SES management, and measures of performance in the SES. Featuring research on topics such as online communication, social accounting, and value reporting, this book is ideal for managers, financial consultants, academicians, researchers, and students interested in accounting, management, internal control, auditing, and technology use in the SES.

owen accounting: *Caryl Phillips's Genealogies* , 2023-11-27 Thematically and structurally, the work of the Kittitian-British writer Caryl Phillips reimagines the notion of genealogy. Phillips's fiction, drama, and non-fiction foreground broken filiations and forever-deferred promises of new affiliations in the aftermath of slavery and colonization. His texts are also in dialogue with multiple historical figures and literary influences, imagining around the life of the African American comedian Bert Williams and the Caribbean writer Jean Rhys, or retelling the story of Othello. Additionally, Phillips's work resonates with that of other writers and visual artists, such as Derek Walcott, Toni Morrison, or Isaac Julien. Written to honor the career of renown Phillipsian scholar Bénédicte Ledent, the contributions to this volume, including one by Phillips himself, explore the multiple ramifications of genealogy, across and beyond Phillips's work.

owen accounting: Accountability and Transparency in the Modern Anthropocene Glen Lehman, 2023-01-20 The book is about accountability processes and how they contribute solutions to our current environmental and global political problems. This book is different to other literature in this field. This is so because the dominant accountability discourse is shaped by what is defined as a neoliberal business case for social and environmental reform. This book assumes a nirvana stance within globalisation where all citizens operate within the parameters of the free market and will recover from adverse economic and political damage. Further this book uses neoliberalism and free-market reforms aims as examples to implement efficient management technologies and create more competitive pressures. Central to the argument of the book are perspectives on authenticity, expressivism and interpretivism which are found to provide a radical reworking of our understanding of being in the world. These frameworks offer a starting point for rethinking the way individuals, businesses and communities ought to be dealing politically with accountability and ecological crises. The argument builds to an accountability perspective that utilises work from expressivism, interpretivism, classical liberalism and postmodern theory. The theoretical quest undertaken in this book is to develop connections between accountability, democratic, ethical and ecological perspectives.
