prime iv hydration wellness addison: Enhancing Cognitive Fitness in Adults PAULA HARTMAN-STEIN, Asenath LaRue, 2011-08-02 Late life is characterized by great diversity in memory and other cognitive functions. Although a substantial proportion of older adults suffer from Alzheimer's disease or another form of dementia, a majority retain a high level of cognitive skills throughout the life span. Identifying factors that sustain and enhance cognitive well-being is a growing area of original and translational research. In 2009, there are as many as 5.2 million Americans living with Alzheimer's disease, and that figure is expected to grow to as many as 16 million by 2050. One in six women and one in 10 men who live to be at least age 55 will develop Alzheimer's disease in their remaining lifetime. Approximately 10 million of the 78 million baby boomers who were alive in 2008 can expect to develop Alzheimer's disease. Seventy percent of people with Alzheimer's disease live at home, cared for by family and friends. In 2008, 9.8 million family members, friends, and neighbors provided unpaid care for someone with Alzheimer's disease or another form of dementia. The direct costs to Medicare and Medicaid for care of people with Alzheimer's disease amount to more than \$148 billion annually (from Alzheimer's Association, 2008 Alzheimer's Disease Facts and Figures). This book will highlight the research foundations behind brain fitness interventions as well as showcase innovative community-based programs to maintain and promote mental fitness and intervene with adults with cognitive impairment. The emphasis is on illustrating the nuts and bolts of setting up and utilizing cognitive health programs in the community, not just the laboratory.

prime iv hydration wellness addison: The Relevance of Social Science for Medicine L. Eisenberg, A. Kleinman, 2012-12-06 The central purpose of this book is to demonstrate the relevance of social science concepts, and the data derived from empirical research in those sciences, to problems in the clinical practice of medicine. As physicians, we believe that the biomedical sciences have made - and will continue to make - important contributions to better health. At the same time, we are no less firmly persuaded that a comprehensive understanding of health and illness, an understanding which is necessary for effective preventive and therapeutic measures, requires equal attention to the social and cultural determinants of the health status of human populations. The authors who agreed to collaborate with us in the writing of this book were chosen on the basis of their experience in designing and executing research on health and health services and in teaching social science concepts and methods which are applicable to medical practice. We have not attempted to solicit contributions to cover the entire range of the social sciences as they apply to medicine. Rather, we have selected key approaches to illustrate the more salient areas. These include: social epidemiology, health services research, social network analysis, cultural

studies of illness behavior, along with chapters on the social labeling of deviance, patterns of therapeutic communication, and economic and political analyses of macro-social factors which influence health outcomes as well as services.

prime iv hydration wellness addison: Handbook of Diversity Issues in Health Psychology

Pamela M. Kato, Traci Mann, 2007-07-27 The field of health psychology has grown dramatically in the last decade, with exciting new developments in the study of how psychological and psychosocial processes contribute to risk for and disease sequelae for a variety of medical problems. In addition, the quality and effectiveness of many of our treatments, and health promotion and disease prevention efforts, have been significantly enhanced by the contributions of health psychologists (Taylor, 1995). Unfortunately, however, much of the theorizing in health psychology and the empirical research that derives from it continue to reflect the mainstream bias of psychology and medicine, both of which have a primary focus on white, heterosexual, middle-class American men. This bias pervades our thinking despite the demographic heterogeneity of American society (U. S. Bureau of the Census, 1992) and the substantial body of epidemiologic evidence that indicates significant group differences in health status, burden of morbidity and mortality, life expectancy, quality of life, and the risk and protective factors that contribute to these differences in health outcomes (National Center for Health Statistics, 1994; Myers, Kagawa-Singer, Kumanyika, Lex, & McKies, 1995). There is also substantial evidence that many of the health promotion and disease prevention efforts that have proven effective with more affluent, educated whites, on whom they were developed, may not yield comparable results when used with populations that differ by ethnicity, social class, gender, or sexual orientation (Cochran & Mays, 1991; Castro, Coe, Gutierrez, & Saenz, this volume; Chesney & Nealey, this volume).

Divided into four main sections, it investigates: the tourism and global environmental change relationship in specific environments global issues related to environmental change differing perceptions of global environmental change held by tourists and the tourist industry. prime iv hydration wellness addison: *Designing Successful Transitions* National Resource Center for the First-Year Experience & Students in Transition (University of South Carolina), 2010 The 2010 edition of this monograph addresses many topics (e.g., administration of orientation programs, family involvement, student characteristics and needs, assessment, and orientation for specific student populations and institutional types) that were included in previous editions but approaches them with new information, updated data, and current theory. However, this edition also takes up new topics in response to the opportunities and concerns facing orientation, transition, and retention professionals such as collaborations among campus units in the development and delivery of orientation, the increase in nontraditional student populations, the need for effective crisis planning and management in orientation programs, new technologies, and even the challenge of making the case for orientation in an era of diminishing resources. The authors have carefully penned chapters incorporating contemporary information, ideas, and concepts while being reflective of traditional practices. Following a preface by Margaret J. Barr and a foreword by Jennifer R. Keup and Craig E. Mack, chapters in this edition include: (1) Brief Overview of the Orientation, Transition, and Retention Field (Craig E. Mack); (2) Theoretical Perspectives on Orientation (Denise L. Rode and Tony W. Cawthon); (3) Making the Case for Orientation: Is It Worth It? (Bonita C.
