Bichel-Findlay, P. Otero, P. Scott, 2024-04-02 Science-fiction author William Gibson is famously quoted as saying, "The future is already here - it's just not very evenly distributed." During the Covid pandemic, telehealth and remote monitoring were elevated from interesting innovations to essential tools in many healthcare systems, but not all countries had the infrastructure necessary to pivot quickly, amply demonstrating the negative consequences of the digital divide. This book presents the proceedings of MedInfo 2023, the 19th World Congress on Medical and Health Informatics, held from 8 - 12 July 2023 in Sydney, Australia. This series of biennial conferences provides a platform for the discussion of applied approaches to data, information, knowledge, and wisdom in health and wellness. The theme and title of MedInfo 2023 was The Future is Accessible, but the digital divide is a major concern for health and care-informatics professionals, whether because of global economic disparities, digital literacy gaps, or limited access to reliable information about health. A total of 935 submissions were received for the conference, of which 228 full papers, 43 student papers and 117 posters were accepted following a thorough peer-review process involving 279 reviewers. Topics covered include: information and knowledge management; quality, safety and outcomes; health data science; human, organizational and social aspects; and global health informatics. Significant advances in artificial intelligence, machine learning, augmented reality, virtual reality, and genomics hold great hope for future healthcare planning, delivery, management, education, evaluation, and research, and this book will be of interest to all those working to not only exploit the benefits of these technologies, but also to identify ways to overcome their associated challenges.

prisma health wellness portal: Wellness Tourism Cornelia Voigt, Christof Pforr, 2013-11-20 Core values of society, health and wellbeing impact today on all aspects of our lives, and have also increasingly influenced patterns of tourism consumption and production. In this context wellness has developed into a significant dimension of tourism in a number of new and long established destinations. However, although it is consistently referred to as one of the most rapidly growing forms of tourism worldwide there still remains a dearth of academic literature on this topic. This book uniquely focuses on the supply side of wellness tourism from a destination perspective in terms of the generation and delivery of products and services for tourists who seek to maintain and improve their health. This approach provides a better understanding of how wellness tourism destinations develop and explores the specific drivers of that growth in a destination context and how destinations successfully compete against each other in globalised market place. A range of wellness destination development and management issues are examined including the importance of authenticity, an appropriate policy framework, delivery of high quality goods and services, participation of a broad range of stakeholders and the development of networks and clusters as well as collaborative strategies essential for a successful development and management of a wellness tourism destination. International case studies and examples from established and new wellness tourism destinations are integrated throughout. The fourth edition of Dr. James Rippe's classic Lifestyle Medicine textbook continues to lead and inform the rapidly growing field of lifestyle medicine. This is the discipline that focuses on the impact of daily habits and actions on both short- and long-term health and quality of life. The first edition of this comprehensive work named the field of lifestyle medicine in the academic medical literature. The fourth edition continues to span and expand the field and offers extensive evidence-based literature in virtually every aspect of lifestyle medicine. This Textbook, edited by cardiologist Dr. James Rippe, who is a leading lifestyle medicine researcher, represents the combined wisdom and recommendations of over 325 experts in virtually every aspect of lifestyle medicine. Chapter authors have been chosen because of their background as leaders in various aspects of lifestyle medicine. Lifestyle Medicine, Fourth Edition contains extensive sections on the treatment and prevention of coronary heart disease, stroke, cancer, diabetes, obesity, substance abuse, dementia, and many other clinical conditions. Key lifestyle modalities such as physical activity, nutrition, weight management, sleep, stress reduction, and positive connections with other humans are supported by detailed discussion and state-of-the-art evidence. The expanded section on behavioral medicine provides an important framework for these discussions. Every chapter has been completely revised and many new topics added, such as lifestyle medicine for nursing, psychiatry, and preventive neurology. The fourth edition of this classic text continues to serve as the leading, comprehensive textbook in lifestyle medicine. The original has been called the "indispensable bible" of lifestyle medicine, and the fourth edition of this work continues to justify this designation. There is no longer any serious doubt that daily habits and actions have a significant impact on multiple aspects of health. The fourth edition of Lifestyle Medicine provides the scientific evidence to support this assertion and will serve as an invaluable reference and guide, not only to lifestyle medicine practitioners but to all primary care physicians, subspecialty physicians, nurses, and other healthcare practitioners.

prisma health wellness portal: Mohs Micrographic Surgery Stephen N. Snow, George R. Mikhail, 2004 Mohs Micrographic Surgery, an advanced treatment procedure for skin cancer, offers the highest potential for recovery--even if the skin cancer has been previously treated. This procedure is a state-of-the-art treatment in which the physician serves as surgeon, pathologist, and reconstructive surgeon. It relies on the accuracy of a microscope to trace and ensure removal of skin cancer down to its roots. This procedure allows dermatologists trained in Mohs Surgery to see beyond the visible disease and to precisely identify and remove the entire tumor, leaving healthy tissue unharmed. This procedure is most often used in treating two of the most common forms of skin cancer: basal cell carcinoma and squamous cell carcinoma. The cure rate for Mohs Micrographic Surgery is the highest of all treatments for skin cancer--up to 99 percent even if other forms of treatment have failed. This procedure, the most exact and precise method of tumor removal, minimizes the chance of regrowth and lessens the potential for scarring or disfigurement.

prisma health wellness portal: Patient Engagement Guendalina Graffigna, Serena Barello, Stefano Triberti, 2016-01-01 Patient engagement should be envisaged as a key priority today to innovate healthcare services delivery and to make it more effective and sustainable. The experience of engagement is a key qualifier of the exchange between the demand (i.e. citizens/patients) and the supply process of healthcare services. To understand and detect the strategic levers that sustain a good quality of patients' engagement may thus allow not only to improve clinical outcomes, but also to increase patients' satisfaction and to reduce the organizational costs of the delivery of services. By assuming a relational marketing perspective, the book offers practical insights about the developmental process of patients' engagement, by suggesting concrete tools for assessing the levels of patients' engagement and strategies to sustain it. Crucial resources to implement these strategies are also the new technologies that should be (1) implemented according to precise guidelines and (2) designed according to a user-centered design process. Furthermore, the book describes possible fields of patients' engagement application by describing the best practices and experiences matured in different fields.

prisma health wellness portal: *Lifestyle Medicine, Third Edition* James M. Rippe, 2019-04-17 The field of lifestyle medicine, which is the study of how daily habits and actions impact on both short- and long-term health and quality of life, continues to expand globally. The scientific and medical literature that supports the success of these lifestyle habits and actions is now overwhelming. Thousands of studies provide evidence that regular physical activity, maintenance of a health body weight, following sound nutritional practices, stress reduction, and other good practices all profoundly impact both health and quality of life. Following its predecessors, *Lifestyle Medicine, Third Edition*, is edited by lifestyle medicine pioneer, cardiologist Dr. James Rippe. This edition has been thoroughly updated and represents the expert opinions of 20 section editors as well as more than 150 expert chapter authors whose knowledge span all aspects of this emerging discipline. Topics cover lifestyle medicine practices including regular physical activity, proper nutrition, and weight management. These principles are applied to the prevention and or treatment of a wide variety of chronic conditions ranging from heart disease and diabetes to cancer, mental health, addiction, and injury prevention. This book serves as evidence base for individuals who wish to practice lifestyle medicine or incorporate some of its principles into either general medicine or subspecialty practice. It provides valuable information to healthcare workers in the fields of nutrition, exercise physiology, psychology, behavioral medicine, health promotion, and public policy where lifestyle medicine principles play an ever-increasing role.

prisma health wellness portal: *WHO guideline on country pharmaceutical pricing policies* , 2020-09-29 In recent years, high prices of pharmaceutical products have posed challenges in high- and low-income countries alike. In many instances, high prices of pharmaceutical products have led to significant financial hardship for individuals and negatively impacted on healthcare systems' ability to provide population-wide access to essential medicines. Pharmaceutical pricing policies need to be carefully planned, carried out, and regularly checked and revised according to changing conditions. Strong, well-thought-out policies can guide well-informed and balanced decisions to achieve affordable access to essential health products. This guideline replaces the 2015 WHO guideline on country pharmaceutical pricing policies, revised to reflect the growing body of literature since the last evidence review in 2010. This update also recognizes country experiences in managing the prices of pharmaceutical products.

prisma health wellness portal: *Health Technology Assessment of Assistance Dogs and Dog-Assisted Interventions* Martina Lundqvist, 2020-09-04 Dogs as an assistive aid for people with disabilities date as far back in time as the first century CE. Today, dogs are used in various settings to help and assist humans. 'Assistance dogs' is an umbrella term for guide dogs, hearing dogs and service dogs. They are custom trained to help and support their owners in their everyday life and thereby give them greater independence. Dogs who perform dog-assisted interventions are another type of working dog, where the dog and the owner work together as a team visiting people with various needs in different settings such as hospitals and nursing homes. These visits aim to

strengthen people's inner motivation, using the dog as an external motivator. There is a lack of evaluations of working dogs in the health technology assessment context, and in the health economic evaluation context. Hence, there is a need for structured analyses that include both the short and long-term effects and the costs of assistance dogs and dog-assisted interventions. The overall aim of this thesis is to explore and assess the use of assistance dogs and dog-assisted interventions. The research questions were investigated using a variety of methods. In paper I, inferential statistical analysis was used to analyse patient-reported outcomes measures. In paper II, a thematic content analysis was employed to explore the experiences of service and hearing dogs. To study the long-term cost-effectiveness of physical service dogs and diabetes alert dogs, a decision analytic model was used in paper III. The input data in studies I, II, and III was obtained from the Service and Hearing Dog Project. In paper III, the data was also supplemented with information from published literature and expert opinions. Paper IV investigated the effects and cost-effectiveness of dog-assisted interventions, and takes the form of a systematic review. Paper I showed that a service or hearing dog may have positive impact on its owner's health-related quality of life, well-being and activity level. Paper II showed that owners of service or hearing dogs experienced both positive physical and psychosocial effects from their dog. Negative experiences were also identified, for example being denied access to public places and negative attitudes from other people. Paper III showed that physical service dogs and diabetes alert dogs are cost-effective in comparison with regular companion dogs, resulting in both lower costs and a gain in QALYs. The one-way sensitivity analysis did not change the results, but the probabilistic sensitivity analysis showed that the results were uncertain. Synthesizing the results from the review in paper IV showed that dog-assisted interventions for therapeutic purposes led to minor to moderate effects in psychiatric conditions. Dog-assisted interventions as an activity had minor to moderate effects on cognitive disorders, and dog-assisted interventions for support purposes were beneficial in different types of medical interventions. Studies of cost-effectiveness were lacking. To conclude, assistance dogs are valuable and may be cost-effective for use as assistive aids and dog-assisted interventions render minor to moderate effects in certain situations in healthcare settings.

Användning av hundar som hjälpmedel för personer med funktionsnedsättning går att spåra ändå tillbaka till första århundradet e.Kr. Idag används hundar i människans tjänst i en mängd olika sammanhang. Assistanshundar är ett samlingsbegrepp för ledarhundar, signalhundar och servicehundar. De är specialutbildade för att hjälpa och stödja sina ägare i deras vardag och på så vis ge dem möjlighet till att leva ett mer självständigt liv. Hundar som utför hundassisterade interventioner är en annan typ av tjänstehund, men deras jobb är inte att hjälpa sin ägare. Istället arbetar hundar som utför hundassisterade interventioner och deras ägare som ett team. Tillsammans besöker de personer med olika behov i olika miljöer som exempelvis sjukhus eller äldreboende. De arbetar med att stärka motivationen hos personerna de träffar. Idag saknas det övergripande utvärderingar som tittar på olika aspekter av den här typen av hundar. Det saknas även utvärderingar som specifikt studerar effekter och kostnader av assistanshundar och hundassisterade interventioner. Det finns därför ett behov av strukturerade analyser som inkluderar både kort- och långsiktiga effekter samt kostnader för denna typ av hundar och interventioner. Det övergripande syftet med denna doktorsavhandling är att utforska och utvärdera användningen av assistanshundar och hundassisterade interventioner. Frågeställningarna studeras med ett brett urval av metoder. I studie I analyseras patientrapporterade utfallsmått med statistiska metoder. I studie II genomförs en tematisk innehållsanalys för att undersöka förarnas upplevelser av service- och signalhundar. För att analysera den långsiktiga kostnadseffektiviteten av fysiska servicehundar och alarmerande diabeteshundar i studie III konstrueras en beslutsmodell. Datamaterialet i studie I, II och III hämtas från service- och signalhundsprojektet. I studie III kompletteras data med information från publicerad litteratur och med expertutlåtande. I studie IV studeras effekterna och kostnadseffektiviteten av hundassisterade interventioner genom en systematisk litteraturoversikt. Studie I visade att en service- eller signalhund kan ha en positiv inverkan på deras ägares hälsorelaterade livskvalitet, välbefinnande och aktivitetsnivå. Resultaten från de tematiska

analyserna i studie II påvisade att ägare av en service- eller signalhund upplevde både positiva fysiska och psykosociala effekter av sin hund. Negativa erfarenheter av hunden identifierades också, till exempel att hunden begränsade möjligheten att vistas i offentliga miljöer och andra personers negativa attityder. Studie III visade att fysiska servicehundar och alarmerande diabeteshundar är kostnadseffektiva i jämförelse med vanliga sällskapshundar, de var både kostnadsbesparande och innebar en QALY-vinst. Känslighetsanalyser av specifika parametrar påverkade inte resultaten, men den probabilistiska känslighetsanalysen visade att resultaten var osäkra. Resultaten från den systematiska litteraturöversikten i artikel IV visade att hundassisterade interventioner som ges i terapeutiskt syfte hade små till måttliga effekter vid psykiatriska tillstånd. Hundassisterade aktiviteter hade små till måttliga effekter vid kognitiva störningar och hundassisterade interventioner som gavs som stöd vid olika typer av medicinska insatser var fördelaktiga. Studier gällande kostnadseffektivitet av hundassisterade interventioner saknades. Sammanfattningsvis, assistanshundar som hjälpmedel ger positiva effekter i flera dimensioner för sina ägare och är sannolikt kostnadseffektiva. Hundassisterade interventioner uppvisar små till måttliga effekter i vissa situationer i hälso- och sjukvården.

prisma health wellness portal: *Assembling the Pieces of a Systematic Review* Margaret J. Foster, Sarah T. Jewell, 2017-03-03 Here is a complete guide for librarians seeking to launch or refine their systematic review services. Conducting searches for systematic reviews goes beyond expert searching and requires an understanding of the entire process of the systematic review. Just as expert searching is not fully mastered by the end of a library degree, mastering the systematic review process takes a great deal of time and practice. Attending workshops and webinars can introduce the topic, but application of the knowledge through practice is required. Running a systematic review service is complicated and requires constant updating and evaluation with new standards, more efficient methods, and improved reporting guidelines. After a brief introduction to systematic reviews, the book guides librarians in defining and marketing their services, covering topics such as when it is appropriate to ask for co-authorship and how to reach out to stakeholders. Next, it addresses developing documentation and conducting the reference interview. Standards specific to systematic reviews, including PRISMA, Institute of Medicine, and Cochrane Collaboration, are discussed. Search strategy techniques, including choosing databases, harvesting search terms, selecting filters, and searching for grey literature are detailed. Data management and critical appraisal are covered in detail. Finally, the best practices for reporting the findings of systematic reviews are highlighted. Experts with experience in both systematic reviews and librarianship, including the editors of the book, contributed to the chapters. Each step (or piece) of the review process (Planning the review, Identifying the studies, Evaluating studies, Collecting and combining data, Explaining the results, and Summarizing the review into a report), are covered with emphasis on information roles. The book is for any librarian interested in conducting reviews or assisting others with reviews. It has several applications: for training librarians new to systematic reviews, for those developing a new systematic review service, for those wanting to establish protocols for a current service, and as a reference for those conducting reviews or running a service. Participating in systematic reviews is a new frontier of librarianship, in which librarians can truly become research partners with our patrons, instead of merely providing access to resources and services.

prisma health wellness portal: Prevention of Skin Cancer David Hill, Dallas R. English, J. Mark Elwood, 2013-03-14 Our series Cancer Prevention - Cancer Control continues to address the causes and prevention of cancer. In this volume, Hill, Elwood, and English bring together a rich resource summarizing the state of science underpinning the primary prevention of skin cancer. While skin cancer causes an increasing burden, particularly in populations of European origin, our understanding of the role of sun exposure together with the genetic components of skin cancer continues to grow. Given the emphasis on evidence-based medicine and public health prevention efforts, it is noteworthy that, although we can all access the same evidence base, countries around the world have had remarkably different responses to the application of this knowledge to prevent skin cancer. The outstanding contribution of the Australian public health community to the scientific understanding of skin cancer etiology and the translation of this knowledge into national prevention efforts uniquely positions the editors to compile this volume focused on the primary prevention of skin cancer. In so doing they draw on an international team of authors to present a "state of the science" summary of skin cancer prevention and to identify those areas where uncertainty remains. To achieve successful prevention of cancer we must translate our scientific knowledge base into effective prevention programs. This book offers the reader keen insights into the depth of our understanding of etiologic pathways for skin cancer. This etiologic science base is complemented by rigorous prevention science placing emphasis on the social context for effective and sustained prevention efforts.

prisma health wellness portal: The World Health Report 2006 World Health Organization, 2006-03-23 The 2006 World Health Report focuses on the chronic shortages of doctors, midwives, nurses and other health care support workers in the poorest countries of the world where they are most needed. This is particularly true in sub-Saharan Africa, which has only four in every hundred global health workers but has a quarter of the global burden of disease, and less than one per cent of the world's financial resources. Poor working conditions, high rates of attrition due to illness and migration, and education systems that are unable to pick up the slack reflect the depth of the challenges in these crisis countries. This report considers the challenges involved and sets out a 10-year action plan designed to tackle the crisis over the next ten years, by which countries can strengthen their health system by building their health workforces and institutional capacity with the support of global partners.

prisma health wellness portal: *Tackling Chronic Disease in Europe* Reinhard Busse, D. Scheller-Kreinsen, Annette Zentner, 2010 Chronic conditions and diseases are the leading cause of mortality and morbidity in Europe, accounting for 86% of total premature deaths, and research suggests that complex conditions such as diabetes and depression will impose an even greater health burden in the future - and not only for the rich and elderly in high-income countries, but increasingly for the poor as well as low- and middle-income countries. The epidemiologic and economic analyses in the first part of the book suggest that policy-makers should make chronic disease a priority. This book highlights the issues and focuses on the strategies and interventions that policy-makers have at their disposal to tackle this increasing challenge. Strategic discussed in the second part of this volume include (1) prevention and early detection, (2) new provider qualifications (e.g. nurse practitioners) and settings, (3) disease management programmes and (4) integrated care models. But choosing the right strategies will be difficult, particularly given the limited evidence on effectiveness and cost-effectiveness. In the third part, the book therefore outlines and discusses institutional and organizational challenges for policy-makers and managers: (1) stimulating the development of new effective pharmaceuticals and medical devices, (2) designing appropriate financial incentives, (3) improving coordination, (4) using information and communication technology, and (5) ensuring evaluation. To tackle these challenges successfully, key policy recommendations are made.

prisma health wellness portal: Determinants of Indigenous Peoples' Health, Second Edition Margo Greenwood, Sarah de Leeuw, Nicole Marie Lindsay, 2018-04-25 Now in its second edition, *Determinants of Indigenous Peoples' Health* adds current issues in environmental politics to the groundbreaking materials from the first edition. The text is a vibrant compilation of scholarly papers by research experts in the field, reflective essays by Indigenous leaders, and poetry that functions as a creative outlet for healing. This timely edited collection addresses the knowledge gap of the health inequalities unique to Indigenous peoples as a result of geography, colonialism, economy, and biology. In this revised edition, new pieces explore the relationship between Indigenous bodies and the land on which they reside, the impact of resource extraction on landscapes and livelihoods, and death and the complexities of intergenerational family relationships. This volume also offers an updated structure and a foreword by Dr. Evan Adams, Chief Medical Officer of the First Nations Health Authority. This is a vital resource for students in the disciplines of health studies, Indigenous studies, public and population health, community health sciences, medicine, nursing, and social work who want to broaden their understanding of the social determinants of health. Ultimately, this is a hopeful text that aspires to a future in which Indigenous peoples no longer embody health inequality.

prisma health wellness portal: Journal of Physical Activity and Health Steven N. Blair, James R. Morrow, Jr., 2005-01 In the past, research involving the relationship between physical activity and health has appeared in many diverse journals, with no one publication being devoted to that relationship. The Journal of Physical Activity and Health (JPAH) answers the need for a single publication with a focus solely on physical activity and health. JPAH publishes original research and review papers examining how physical activity influences all aspects of health, studying physical activity as an exposure as well as an outcome. It also invites papers that examine the behavioral, community, and environmental interventions that may affect physical activity on an individual and population basis. Recent issues of JPAH have addressed topics such as measurement of physical activity, surveillance of physical activity, meeting guidelines for physical activity in working populations, and physical activity intervention in older adults with chronic diseases. Research has been published from many international authors. Articles on physical activity patterns and the

environment are planned for later this year. Also available is the online format of JPAH that offers the same authoritative content contained in the print edition, but with the additional advantages of electronically formatted material including the potential to search journals in seconds, access to five years of back issues, and the ability to examine the online version weeks before the print version arrives. Online subscribers are also sent each issue's table of contents by e-mail to announce that a new issue has been published.

prisma health wellness portal: Handbook of Smart Homes, Health Care and Well-Being Joost van Hoof, George Demiris, Eveline J.M. Wouters, 2016-03-14 Smart homes, home automation and ambient-assisted living are terms used to describe technological systems that enrich our living environment and provide means to support care, facilitate well-being and improve comfort. This handbook provides an overview of the domain from the perspective of health care and technology. In Part 1, we set out to describe the demographic changes in society, including ageing and diseases and impairments which lead to the needs for technological solutions. In Part 2, we describe the technological solutions, ranging from sensor-based networks, components, to communication protocols that are used in the design of smart homes. We also deal with biomedical features which can be measured and services that can be delivered to end-users as well as the use of social robots. In Part 3, we present best practices in the field. These best practices mainly focus on existing projects in Europe, the USA and Asia, in which people receive help through dedicated technological solutions being part of the continuum of the home environment and care.
