Their offerings are carefully curated to provide a holistic approach to wellness, incorporating cutting-edge therapies alongside traditional wellness practices. Here are some key services they provide:

### **IV Therapy:**

IV therapy delivers essential vitamins, minerals, and hydration directly into your bloodstream, bypassing the digestive system for faster absorption and maximum bioavailability. This is particularly beneficial for boosting immunity, combating fatigue, and recovering from illness or strenuous activity. Restore Hyper Wellness Chandler offers customized IV drips tailored to individual needs, from boosting energy to enhancing skin health.

## **NAD+ Therapy:**

NAD+ therapy aims to replenish these levels, potentially reversing some of these age-related effects. Consult with a Restore Hyper Wellness provider to explore if this is right for you.

## **Peptide Therapy:**

Peptides are short chains of amino acids that act as messengers within the body, influencing various biological processes. Peptide therapy utilizes these messengers to target specific areas of concern, such as hormone balance, muscle growth, or fat loss. Restore Hyper Wellness Chandler offers consultations to determine which peptide therapy might be beneficial based on your specific health goals.

## **Botox and Fillers:**

Beyond the core wellness services, Restore Hyper Wellness Chandler also provides aesthetic treatments like Botox and fillers. These services contribute to a holistic approach to well-being by addressing concerns about appearance and self-confidence, further enhancing your overall feeling of wellness.

Riba, Thomas Wise, 2018-12-07 This book offers a resource to aid in implementing psychosocial screening, assessment, and consequently integrating prevention, care and treatment (i.e. pharmacological, psychosocial rehabilitation and psychotherapeutic) in medicine. It is becoming increasingly recognized that one method of combating spiraling health care costs in developed nations is to integrate psychiatric care into medicine including primary care settings. This volume reviews the main issues relative to the paradigm of a person-centered and recovery-oriented approach that should imbue all medical areas and specialties. It proposes integration methods in screening and assessment, clinimetric approach, dignity conserving care, cross-cultural and ethical aspects, treatment and training as a basic and mandatory need of a whole psychosomatic approach bridging the several specialties in medicine. As such, the book addresses a topic that all physicians, including primary care and psychiatric professionals in a wide variety of mental health settings are currently discussing, planning and preoccupied with, namely the task of integrating mental health into all the medical fields, including primary care, cardiology, psychiatry, oncology and so on.

**restore hyper wellness chandler:** *Parentology* Dalton Conley, 2014-03-18 An award-winning scientist offers his unorthodox approach to childrearing: “Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conventions” (Amy Chua, author of *Battle Hymn of the Tiger Mother*). If you’re like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In *Parentology*, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley’s sassy kids show him the limits of his profession. *Parentology* teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You’ll be laughing and learning at the same time.

**restore hyper wellness chandler:** *Digital Objects, Digital Subjects* David Chandler, Christian Fuchs, 2019-01-29 This volume explores activism, research and critique in the age of digital subjects and objects and Big Data capitalism after a digital turn said to have radically transformed our political futures. Optimists assert that the ‘digital’ promises: new forms of community and ways of knowing and sensing, innovation, participatory culture, networked activism, and distributed democracy. Pessimists argue that digital technologies have extended domination via new forms of control, networked authoritarianism and exploitation, dehumanization and the surveillance society. Leading international scholars present varied interdisciplinary assessments of such claims – in theory and via dialogue – and of the digital’s impact on society and the potentials, pitfalls, limits and ideologies, of digital activism. They reflect on whether computational social science, digital humanities and ubiquitous datafication lead to digital positivism that threatens critical research or lead to new horizons in theory and society. **restore hyper wellness chandler: Six Weeks** John Lewis-Stempel, 2010 Often fresh out of school, still with their recent Latin lessons fresh in their minds, many junior officers in the First World War went straight from being prefects to having to lead their men in a charge over the top, knowing that the German machine guns would be trained on the man at the front, knowing that so many of their predecessors had fallen before them. In this remarkable book, John Lewis-Stempel focuses on the oft-overlooked men who were crucial to Britain's war effort, the men who had to persuade the ordinary Tommy to follow them into action. Basing his account on a huge range of first person accounts, including poignant letters and diaries sent home or back to their school, Lewis-Stempel reveals what motivated these men who faced an average life expectancy of just six weeks once they reached the frontline. He shows the life they led in the trenches, how they sought to keep up the spirits of their men, and how they tried to behave with honour in a world where their codes of conduct were being quite literally shot to pieces.--Publisher's description.

**restore hyper wellness chandler: Ayurvedic Science of Food and Nutrition** Sanjeev

Rastogi, 2014-01-16 Ayurveda is widely considered to be one of the oldest health care traditions still in practice today. Originating in India over 3,000 years ago, it is now increasingly recognized and practiced globally including in many European countries and the United States. Food and nutrition play a crucial role in the health care wisdom of Ayurveda. The Ayurvedic Science of Food and Nutrition discusses the various principles of healthy eating as prescribed by Ayurveda. Divided into three sections, it addresses the fundamentals, the clinical applications, and the future challenges of Ayurveda. Specifically, the book discusses issues such as the concept of diet, the use of food as medicine, especially to treat diabetes and cancer, convalescent food practices, and fasting therapy. The Ayurvedic Science of Food and Nutrition is unique in that it is one of the only books to investigate the scientific rationale behind Ayurveda, enabling this health care tradition to potentially be incorporated into a Western clinical practice model when this latter conventional therapy is found to be ineffective.

**restore hyper wellness chandler: Science Breakthroughs to Advance Food and Agricultural Research by 2030** National Academies of Sciences, Engineering, and Medicine, Division of Behavioral and Social Sciences and Education, Board on Environmental Change and Society, Health and Medicine Division, Food and Nutrition Board, Division on Earth and Life Studies, Water Science and Technology Board, Board on Life Sciences, Board on Atmospheric Sciences and Climate, Board on Agriculture and Natural Resources, Committee on Science Breakthroughs 2030: A Strategy for Food and Agricultural Research, 2019-04-21 For nearly a century, scientific advances have fueled progress in U.S. agriculture to enable American producers to deliver safe and abundant food domestically and provide a trade surplus in bulk and high-value agricultural commodities and foods. Today, the U.S. food and agricultural enterprise faces formidable challenges that will test its long-term sustainability, competitiveness, and resilience. On its current path, future productivity in the U.S. agricultural system is likely to come with trade-offs. The success of agriculture is tied to natural systems, and these systems are showing signs of stress, even more so with the change in climate. More than a third of the food produced is unconsumed, an unacceptable loss of food and nutrients at a time of heightened global food demand. Increased food animal production to meet greater demand will generate more greenhouse gas emissions and excess animal waste. The U.S. food supply is generally secure, but is not immune to the costly and deadly shocks of continuing outbreaks of food-borne illness or to the constant threat of pests and pathogens to crops, livestock, and poultry. U.S. farmers and producers are at the front lines and will need more tools to manage the pressures they face. *Science Breakthroughs to Advance Food and Agricultural Research by 2030* identifies innovative, emerging scientific advances for making the U.S. food and agricultural system more efficient, resilient, and sustainable. This report explores the availability of relatively new scientific developments across all disciplines that could accelerate progress toward these goals. It identifies the most promising scientific breakthroughs that could have the greatest positive impact on food and agriculture, and that are possible to achieve in the next decade (by 2030).

**restore hyper wellness chandler: Virtual Reality** Melanie Chan, 2014-01-16 The idea of virtual realities has a long and complex historical trajectory, spanning from Plato's concept of the cave and the simulacrum, to artistic styles such as Trompe L'oeil, and more recently developments in 3D film, television and gaming. However, this book will pay particular attention to the time between the 1980s to the 1990s when virtual reality and cyberspace were represented, particularly in fiction, as a wondrous technology that enabled transcendence from the limitations of physical embodiment. The purpose of this critical historical analysis of representations of virtual reality is to examine how they might deny, repress or overlook embodied experience. Specifically, the author will contend that embodiment is a fundamental aspect of immersion in virtual reality, rather than something which is to be transcended. In this way, the book aims to challenge distorted ideas about transcendence and productively contribute to debates about embodiment and technology.

**restore hyper wellness chandler: Therapeutic Exercise** Frances E. Huber, Christine Lynn Wells, 2006 In response to the increasing need for progressing a treatment plan, this text shows the reader how to prescribe therapeutic exercise based on the best evidence and clinical experience. It

teaches therapists how to make informed clinical decisions about the best way to progress treatment for their clients that integrates balance, strength, endurance and all of the areas necessary for optimal function. It also provides the underlying theories of treatment planning, using APTA's Guide to Physical Therapist Practice, 2nd Edition as the basis for practice. Three on-going client cases are woven throughout the text, promoting clinical reasoning skills and providing a framework to construct new knowledge. Learning objectives at the start of each chapter help readers focus their attention on important principles and concepts. Stop and Think questions mixed throughout the chapters show students how to reflect on new information and how it may be applied in a variety of situations. Client vignettes in each chapter illustrate the importance of learning the concepts for transfer to new situations. Concept maps illustrate how the chapter is organized and how elements fit together to provide a framework for constructing knowledge. A focus on the disablement model allows students to apply therapeutic exercise for maximum functionality as defined by the APTA. A focus on research demonstrates the best way to prescribe exercise by focusing on best practice. A companion DVD provides 60 minutes of video clips that gives students the ability to observe an activity, critique the technique, compare and contrast movement in a wide range of ages, select the appropriate exercise for the job and many other applications.

**restore hyper wellness chandler:** *Urban Resilience in a Global Context* Dorothee Brantz, Avi Sharma, 2020-10-31 Urban Resilience is seen by many as a tool to mitigate harm in times of extreme social, political, financial, and environmental stress. Despite its widespread usage, however, resilience is used in different ways by policy makers, activists, academics, and practitioners. Some see it as a key to unlocking a more stable and secure urban future in times of extreme global insecurity; for others, it is a neoliberal technology that marginalizes the voices of already marginal peoples. This volume moves beyond praise and critique by focusing on the actors, narratives and temporalities that define urban resilience in a global context. By exploring the past, present, and future of urban resilience, this volume unlocks the potential of this concept to build more sustainable, inclusive, and secure cities in the 21st century.
