syracuse university accounting: Spatializing Authoritarianism Natalie Koch, 2022-06-30
Authoritarianism has emerged as a prominent theme in popular and academic discussions of politics since the 2016 US presidential election and the coinciding expansion of authoritarian rhetoric and ideals across Europe, Asia, and beyond. Until recently, however, academic geographers have not focused squarely on the concept of authoritarianism. Its longstanding absence from the field is noteworthy as geographers have made extensive contributions to theorizing structural inequalities, injustice, and other expressions of oppressive or illiberal power relations and their diverse spatialities. Identifying this void, *Spatializing Authoritarianism* builds upon recent research to show that even when conceptualized as a set of practices rather than as a simple territorial label, authoritarianism has a spatiality: both drawing from and producing political space and scale in many often surprising ways. This volume advances the argument that authoritarianism must be investigated by accounting for the many scales at which it is produced, enacted, and imagined. Including a diverse array of theoretical perspectives and empirical cases drawn from the Global South and North, this collection illustrates the analytical power of attending to authoritarianism's diverse scalar and spatial expressions, and how intimately connected it is with identity narratives, built landscapes, borders, legal systems, markets, and other territorial and extraterritorial expressions of power.

syracuse university accounting: Accounting and Food Massimo Sargiacomo, Luciano D'Amico, Roberto Di Pietra, 2016-03-02 The interrelations between accounting and food have been hitherto neglected at an international level. This regret is particularly meaningful with regards to Italy, where 'Food', besides being a physiological need to satisfy, is one of the main pillars of the 'Made in Italy' Industry, and the so-called Italian life-style, which has become a part of the popular culture. *Accounting and Food* seeks to explore the accounting, business and financial history of some

syracuse university accounting: **Global Perspectives on Quality Assurance and Accreditation in Higher Education Institutions** Magd, Hesham, Kunjumuhammed, Siraj Kariyilaparambu, 2021-09-17 Quality accreditation in higher education institutions (HEIs) is currently a buzzword. The need to maintain high-quality education standards is a critical requirement for HEIs to remain competitive in the market and for government and regulatory bodies to ensure the quality standards of programs offered. From being an implicit requirement that is internally addressed, quality assurance activities become an explicit requirement that is regularly

audited and appraised by national and international accreditation agencies. HEIs are voluntarily integrating quality management systems (QMS), institutional and program-specific, in response to the political and competitive environment in which it exists. Through its higher education department or by creating non-profitable accreditation bodies, many governments have implemented a quality framework for licensing HEIs and invigilates its adherence based on which accreditation statuses are granted for HEIs. Global Perspectives on Quality Assurance and Accreditation in Higher Education Institutions provides a comprehensive framework for HEIs to address quality assurance and quality accreditation requirements and serves as a practical tool to develop and deploy well-defined quality management systems in higher education. The book focuses on the critical aspects of quality assurance; the need to develop a concise and agile vision, mission, values, and graduate attributes; and to develop a system that effectively aligns the various activities of the HEI to the attainment of the strategic priorities listed in the institutional plans. The chapters each cover the various facets of the quality assurance framework and accreditation agencies' requirements with practical examples of each. This book is useful for HEI administrators, quality assurance specialists in HEIs, heads of academic departments, internal auditors, external auditors, and other practitioners of quality, along with stakeholders, researchers, academicians, and students interested in quality assurance and accreditation in higher education.

syracuse university accounting: *Sustainability and Management* Kıymet Çalıyurt, Ülkü Yüksel, 2017-07-14 In the wake of the 1987 Brundtland Report, sustainable development has become key to the management systems within businesses, and a means by which companies can increase their long-term value. Being a 'sustainable company' increasingly means 'staying alive in business' and has become a necessity for all kinds of enterprises, from the micro-sized to global corporations. In more recent years, many companies, and indeed governments, have looked at sustainability as a means to combat the multiple challenges of environmental accidents, global warming, resource depletion, energy, poverty and pollution. However, being sustainable or maintaining sustainability is not an easy task for a company's management function. It needs continuous support and

engagement from the board, the executive management, staff and other stakeholders alike. Additionally, it brings extra costs to the company in terms of hiring trained staff, organising continuous training in the company, publishing sustainability reports and subscribing to a rating system. Sustainability must be nourished by a company's board as well as by all of its departments, such as accounting, marketing and human resources. By the same token, it is not enough for a company simply to declare itself a 'sustainable business' or rely on past measures and reputation; sustainability is an ongoing activity and one which has to be proved by periodically disclosing sustainability reports, according to international rating systems. In *Sustainability and Management: An International Perspective*, Kıymet Çaliyurt and Ülkü Yüksel bring together international authors from a variety of specialisations to discuss the development, aspects, problems, roadmap, trends and disclosure systems for sustainability in management. The result is a lively, insightful exposition of the field.

Competence in investment analysis is now a basic requirement for most practicing managers, engineers, and financial analysts in order to avoid possible serious mistakes arising from flawed or inadequate knowledge of the discipline. Furthermore, individuals who make decisions based on technical economics stake their professional futures, in many cases, on the accuracy of such evaluations. The aim of this volume is to provide a balanced view of the essential components of economic and financial analysis including: 1. Strategic and design issues; 2. Principles of cost management systems and activity-based costing, and; 3. Tools for developing the financial measures of investment worth, with advanced topics and case studies in these three areas. This volume provides a refreshing insight into the various methods that engineers, managers, and financial analysts may need to consider to find good alternatives for the investment of scarce resources. Not only are new ventures presented, but also improvements within existing facilities that include process modification, product design, equipment replacement, and plant expansion/contraction.
