topcare family wellness clinic: Anti-ageing Medicine Astrid Stuckelberger, 2008 The 21st century technological development is revolutionizing medicine and health care, bringing new hopes to human suffering by offering cures and treatments which were unthinkable a few decades ago. This is where anti-ageing medicine finds its niche. Anti-ageing medicine aims at slowing, arresting, and reversing phenomena associated with ageing by merging biotechnological innovation and engineered solutions. Ideally, by means of the newest medical technology, the body machinery should be kept fit and at peak performance all life long. Early detection of age-related dysfunction should thus be fixed at any age with interventions such as metabolic fine tuning, enhancement, regeneration, restoration or replacement of body parts (i.e. organs, skin, bone or muscle). It covers a vast array of domains: from cell therapy to pharmaceutical interventions, from bio-surgery to aesthetic surgery, from human enhancement to fortified food, from smart housing and robots to toxic-free environments. Anti-ageing medicine holds promises but also significant risks and safety issues which are addressed in this book. It presents the latest scientific evidence on what works or does not work. It also provides public policy recommendations to ensure the protection of consumers and their rights while encouraging research and development. This book is intended for academics, health professionals, business persons, consumers and policy-makers interested in the latest evidence and ethical issues about anti-ageing medicine.

topcare family wellness clinic: Rural Urban Framework Joshua Bolchover, John Lin, 2013-10-24 While most attention is given to the booming mega-cities in China and the associated problems of over-population, the rural areas in China are being largely ignored. Yet, a sustainable development of the rural areas is precisely that, which will be decisive for China's future. Through its rapid development into an industrial country, China now needs to tackle far-reaching problems such as increasing population, growing income gap between the poor and the rich, rural exodus, decreased agricultural production, and environmental pollution. Rural Urban Framework is a work group at the University of Hong Kong that not only researches the far-reaching changes of the last thirty years in China's rural areas, but has also realized concrete projects aimed at improving supply and infrastructure on site. In this publication, the authors present for the first time the results of their research as well as their built projects in the Chinese backlands, and question whether China's only future model lies in cities.

topcare family wellness clinic: Neurosurgery Anne J. Moore, David W. Newell, 2007-04-22 This book provides coverage of a broad range of topics in the field of neurosurgery, 5 for residents and registrars in training and for recent graduates of training programs. 6 As neurosurgical training incorporates expertise from centers worldwide, there is a 7 need to have input from specialists in neurosurgery from various countries. This text 8 is a compilation by expert authors in the USA and the UK to provide information on 9 the basic knowledge and clinical management required for optimal care of neuro- 2011 surgical patients. 1 The text is an up-to-date synopsis of the field of neurosurgery from American and 2 British perspectives, which covers the most common clinical conditions encountered 3 by neurosurgeons. topcare family wellness clinic: Patient Care and Professionalism Catherine DeAngelis, 2013-08-15 The chapters in Patient Care and Professionalism are ordered so that the main character in this book, the patient, has the first voice, followed by the ancient history of professionalism, the recent resurrection of professionalism in the United Kingdom (UK), and finally professionalism in the United States (US). The eleven chapters cover the various health care professions: medicine, nursing, public health, law, leadership, religion, and finally a chapter on the science of professionalism. The chapters are all written by internationally known experts. The authors share their collective experience to shine light on professionalism from a new angle, revealing the way to a new kind of relationship for patients and physicians of the future—a rebirth of trust borne in real collaboration. The volume begins with a discussion of what is meant by the term 'advocacy' in the practice of medicine, and then offers perspectives on where opportunities for medical advocacy lie, the rich collaborations they engender, and ways to overcome systemic barriers to advocacy.

topcare family wellness clinic: *Birthright* Stephen R. Kellert, 2012-11-13 Human health and well-being are inextricably linked to nature; our connection to the natural world is part of our biological inheritance. In this engaging book, a pioneer in the field of biophilia—the study of human beings' inherent affinity for nature—sets forth the first full account of nature's powerful influence on the quality of our lives. Stephen Kellert asserts that our capacities to think, feel, communicate, create, and find meaning in life all depend upon our relationship to nature. And yet our increasing disconnection and alienation from the natural world reflect how seriously we have undervalued its important role in our lives. Weaving scientific findings together with personal experiences and perspectives, Kellert explores specific human tendencies—including affection, aversion, intellect, control, aesthetics, exploitation, spirituality, and communication—to discover how they are influenced by our relationship with nature. He observes that a beneficial relationship with the natural world is an instinctual inclination, but must be earned. He discusses how we can restore the balance in our relationship by means of changes in childhood development, education, conservation, building design, ethics, and everyday life. Kellert's moving book provides exactly what is needed now: a fresh understanding of how much our essential humanity relies on being a part of the natural world.
