viva wellness point loma: Redesigning the Process for Establishing the Dietary Guidelines for Americans National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Food and Nutrition Board, Committee to Review the Process to Update the Dietary Guidelines for Americans, 2017-12-16 What foods should Americans eat to promote their health, and in what amounts? What is the scientific evidence that supports specific recommendations for dietary intake to reduce the risk of multifactorial chronic disease? These questions are critically important because dietary intake has been recognized to have a role as a key determinant of health. As the primary federal source of consistent, evidence-based information on dietary practices for optimal nutrition, the Dietary Guidelines for Americans (DGA) have the promise to empower Americans to make informed decisions about what and how much they eat to improve health and reduce the risk of chronic disease. The adoption and widespread translation of the DGA requires that they be universally viewed as valid, evidence-based, and free of bias and conflicts of interest to the extent possible. However, this has not routinely been the case. A first short report meant to inform the 2020 review cycle explored how the advisory committee selection process can be improved to

provide more transparency, eliminate bias, and include committee members with a range of viewpoints. This second and final report recommends changes to the DGA process to reduce and manage sources of bias and conflicts of interest, improve timely opportunities for engagement by all interested parties, enhance transparency, and strengthen the science base of the process.

viva wellness point loma: Junípero Serra Steven W. Hackel, 2013-09-03 A portrait of the priest and colonialist who is one of the most important figures in California's history In the 1770s, just as Britain's American subjects were freeing themselves from the burdens of colonial rule, Spaniards moved up the California coast to build frontier outposts of empire and church. At the head of this effort was Junípero Serra, an ambitious Franciscan who hoped to convert California Indians to Catholicism and turn them into European-style farmers. For his efforts, he has been beatified by the Catholic Church and widely celebrated as the man who laid the foundation for modern California. But his legacy is divisive. The missions Serra founded would devastate California's Native American population, and much more than his counterparts in colonial America, he remains a contentious and contested figure to this day. Steven W. Hackel's groundbreaking biography, Junípero Serra: California's Founding Father, is the first to remove Serra from the realm of polemic and place him within the currents of history. Born into a poor family on the Spanish island of Mallorca, Serra joined the Franciscan order and rose to prominence as a priest and professor through his feats of devotion and powers of intellect. But he could imagine no greater service to God than converting Indians, and in 1749 he set off for the new world. In Mexico, Serra first worked as a missionary to Indians and as an uncompromising agent of the Inquisition. He then became an itinerant preacher, gaining a reputation as a mesmerizing orator who could inspire, enthrall, and terrify his audiences at will. With a potent blend of Franciscan piety and worldly cunning, he outmaneuvered Spanish royal officials, rival religious orders, and avaricious settlers to establish himself as a peerless frontier administrator. In the culminating years of his life, he extended Spanish dominion north, founding and promoting missions in present-day San Diego, Los Angeles, Monterey, and San Francisco. But even Serra could not overcome the forces massing against him. California's military leaders rarely shared his zeal, Indians often opposed his efforts, and ultimately the missions proved to be cauldrons of disease and discontent. Serra, in his hope to save souls, unwittingly helped bring about the massive decline of California's indigenous population. On the three-hundredth anniversary of Junípero Serra's birth, Hackel's complex, authoritative biography tells the full story of a man whose life and legacies continue to be both celebrated and denounced. Based on exhaustive research and a

vivid narrative, this is an essential portrait of America's least understood founder.

viva wellness point loma: Endodontology Domenico Ricucci, José Freitas Siqueira (Jr.), 2013 This unique book is a serious study of clinical endodontics that underscores the biologic foundation of endodontic treatment and seeks to bridge the gap between basic endodontic knowledge and advanced endodontic biology. Written by a well-established clinician and a researcher with extensive background in endodontic microbiology, this book combines invaluable histologic illustrations of endodontic disease with a robust clinical text that (1) describes the pathologies affecting dental tissues as well as their reactions to the clinical procedures and (2) uses clinical microbiology to explain the observed phenomena. Treatments of complex endodontic infections are presented for both vital and nonvital pulp therapy, and the influence of periradicular pathology are addressed in detail. Moreover, the authors waded into controversial topics with detailed and comprehensive analysis, including the implications of lateral canals on treatment and the causes of treatment failures and how to avoid them. The purpose of this book is to improve endodontic treatment, and the authors demonstrate how an in-depth knowledge of endodontic infections can help clinicians to synthesize the data from patient examinations in order to visualize what has taken place, understand the processes at work, and predict what will occur with the patient. An essential clinical text for comprehensive endodontic study.
