## Wellness Topics for Seniors: Thriving in Your Golden Years

Are you a senior, or do you care for someone who is? Navigating the later stages of life presents unique challenges and opportunities. Maintaining wellness isn't just about avoiding illness; it's about actively pursuing a vibrant and fulfilling life. This comprehensive guide dives into key wellness topics specifically tailored for seniors, offering practical advice and actionable steps to help you or your loved one thrive. We'll explore everything from physical health and nutrition to mental wellbeing and social connection, equipping you with the knowledge to enjoy a healthier, happier, and more meaningful life in your golden years.

### 1. Physical Wellness: Movement, Mobility, and Maintaining Strength

Maintaining physical health is crucial as we age. It's not about rigorous workouts; it's about finding enjoyable activities that keep you moving and strengthen your body.

**Low-Impact Exercise:** Forget grueling gym sessions. Focus on activities like walking, swimming, cycling, or chair yoga. These are gentle on the joints but still provide excellent cardiovascular benefits and improve strength and flexibility. Consult your doctor before starting any new exercise program.

**Balance and Coordination:** Falls are a significant concern for seniors. Incorporate exercises that improve balance and coordination, such as Tai Chi or Pilates. These practices enhance body awareness and reduce the risk of falls.

**Strength Training:** Maintaining muscle mass is vital for preventing age-related decline. Strength training, even with light weights or resistance bands, can significantly improve strength, balance, and overall mobility. Consider working with a physical therapist to develop a safe and effective program.

**Regular Check-ups:** Don't neglect routine medical check-ups and screenings. Early detection of potential health problems can significantly improve treatment outcomes.

### 2. Nutrition for Senior Wellness: Fueling a Healthy Body

Proper nutrition plays a pivotal role in maintaining energy levels, supporting immune function, and preventing age-related diseases.

**Balanced Diet:** Focus on a balanced diet rich in fruits, vegetables, whole grains, and lean protein. These provide essential vitamins, minerals, and antioxidants to support overall health.

**Hydration:** Dehydration is a common problem among seniors, leading to fatigue and confusion. Make sure to drink plenty of water throughout the day.

**Dietary Considerations:** Certain dietary adjustments may be necessary as we age. For example, paying attention to calcium and vitamin D intake for bone health is crucial. Consult a registered

dietitian or your doctor to address any specific dietary needs or concerns.

**Mindful Eating:** Pay attention to your body's hunger and fullness cues. Eat slowly and savor your food, fostering a positive relationship with eating.

### **3. Cognitive Wellness: Keeping Your Mind Sharp**

Maintaining cognitive function is vital for independence and quality of life. Engaging your mind through various activities can help stave off age-related cognitive decline.

**Brain Training Games:** Puzzles, brain teasers, and memory games can help keep your mind sharp and challenge your cognitive abilities.

**Learning New Skills:** Learning a new language, taking up a musical instrument, or engaging in a new hobby stimulates brain plasticity and promotes cognitive health.

**Social Interaction:** Regular social interaction is essential for maintaining cognitive function. Engage in conversations, participate in social activities, and connect with friends and family.

**Mental Stimulation:** Read books, solve crossword puzzles, or participate in stimulating discussions to keep your mind active and engaged.

### **4. Emotional and Mental Wellness: Nurturing Your Inner Self**

Emotional and mental wellness are as crucial as physical health. Addressing emotional wellbeing and managing stress are paramount for a fulfilling life.

**Stress Management Techniques:** Practice relaxation techniques such as deep breathing, meditation, or yoga to manage stress effectively.

**Emotional Support:** Don't hesitate to seek emotional support from friends, family, or a therapist if you are struggling.

**Mindfulness and Meditation:** Practicing mindfulness can help you stay present and manage negative emotions.

**Hobbies and Interests:** Engage in activities that you enjoy to foster a sense of purpose and fulfillment.

### **5. Social Wellness: Staying Connected and Engaged**

Social connection is a fundamental aspect of wellbeing. Maintaining strong social connections promotes happiness, reduces stress, and combats feelings of isolation.

**Staying Connected:** Make an effort to stay connected with family and friends. Regular phone calls, visits, or video chats can help maintain relationships.

**Social Activities:** Participate in social activities such as senior centers, book clubs, or volunteer work to meet new people and build connections.

**Community Involvement:** Volunteering or participating in community events provides a sense of purpose and connection.

**Combating Loneliness:** Loneliness is a common issue for seniors. Make a conscious effort to combat loneliness by actively seeking out social interaction.

## Conclusion

Maintaining wellness as a senior is a journey, not a destination. By focusing on physical activity, proper nutrition, cognitive stimulation, emotional wellbeing, and social connection, you can significantly improve your quality of life and enjoy a vibrant and fulfilling life in your golden years. Remember to consult with your healthcare provider to personalize your wellness plan and address any specific needs or concerns.

## FAQs

1. What are some affordable ways to stay active as a senior?

Many low-impact activities like walking, swimming at a community pool, or chair exercises are affordable and accessible. Check your local community center for subsidized programs.

1. How can I improve my sleep quality as a senior?

Establish a regular sleep schedule, create a relaxing bedtime routine, and ensure your bedroom is dark, quiet, and cool. Limit screen time before bed.

1. What are some good resources for finding senior-friendly social activities?

Your local senior center, community centers, places of worship, and even online groups can be great resources for finding social activities.

1. How can I cope with age-related memory loss?

Engage in mentally stimulating activities, maintain a healthy lifestyle, and consider strategies like memory aids and organization tools. If concerned, consult a doctor.

1. Are there any specific supplements recommended for seniors?

Consult your doctor before taking any supplements. Certain vitamins and minerals, like Vitamin D and Calcium, might be beneficial depending on your individual needs. They can assess your specific needs and make personalized recommendations.

**wellness topics for seniors:** *Senior Fitness* Ruth E. Heidrich, 2005-03 The senior years don't have to be filled with aches and pains. At age seventy, Ruth Heidrich has the bone mass density of a woman in her early thirties and a resting heart rate of forty-four. **wellness topics for seniors:** Social Isolation and Loneliness in Older Adults National Academies of Sciences, Engineering, and Medicine, Division of Behavioral and Social Sciences and Education, Health and Medicine Division, Board on Behavioral, Cognitive, and Sensory Sciences, Board on Health Sciences Policy, Committee on the Health and Medical Dimensions of Social Isolation and Loneliness in Older Adults, 2020-05-14 Social isolation and loneliness are serious yet underappreciated public health risks that affect a significant portion of the older adult population. Approximately one-quarter of community-dwelling Americans aged 65 and older are considered to be socially isolated, and a significant proportion of adults in the United States report feeling lonely. People who are 50 years of age or older are more likely to experience many of the risk factors that can cause or exacerbate social isolation or loneliness, such as living alone, the loss of family or friends, chronic illness, and sensory impairments. Over a life course, social isolation and loneliness may be episodic or chronic, depending upon an individual's circumstances and perceptions. A substantial body of evidence demonstrates that social isolation presents a major risk for premature mortality, comparable to other risk factors such as high blood pressure, smoking, or obesity. As older adults are particularly high-volume and high-frequency users of the health care system, there is an opportunity for health care professionals to identify, prevent, and mitigate the adverse health impacts of social isolation and loneliness in older adults. *Social Isolation and Loneliness in Older Adults* summarizes the evidence base and explores how social isolation and loneliness affect health and quality of life in adults aged 50 and older, particularly among low income, underserved, and vulnerable populations. This report makes recommendations specifically for clinical settings of health care to identify those who suffer the resultant negative health impacts of social isolation and loneliness and target interventions to improve their social conditions. *Social Isolation and Loneliness in Older Adults* considers clinical tools and methodologies, better education and training for the health care workforce, and dissemination and implementation that will be important for translating research into practice, especially as the evidence base for effective interventions continues to flourish.

**wellness topics for seniors: TIP 35: Enhancing Motivation for Change in Substance Use Disorder Treatment (Updated 2019)** U.S. Department of Health and Human Services, 2019-11-19 Motivation is key to substance use behavior change. Counselors can support clients' movement toward positive changes in their substance use by identifying and enhancing motivation that already exists. Motivational approaches are based on the principles of person-centered counseling. Counselors' use of empathy, not authority and power, is key to enhancing clients' motivation to change. Clients are experts in their own recovery from SUDs. Counselors should engage them in collaborative partnerships. Ambivalence about change is normal. Resistance to change is an expression of ambivalence about change, not a client trait or characteristic. Confrontational approaches increase client resistance and discord in the counseling relationship. Motivational approaches explore ambivalence in a nonjudgmental and compassionate way.

**wellness topics for seniors: Families Caring for an Aging America** National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Health Care Services, Committee on Family Caregiving for Older Adults, 2016-12-08 Family caregiving affects millions of Americans every day, in all walks of life. At least 17.7 million individuals in the United States are caregivers of an older adult with a health or functional limitation. The nation's family caregivers provide the lion's share of long-term care for our older adult population. They are also central to older adults' access to and receipt of health care and community-based social services. Yet the need to recognize and support caregivers is among the least appreciated challenges facing the aging U.S. population. *Families Caring for an Aging America* examines the prevalence and nature of family caregiving of older adults and the available evidence on the effectiveness of programs, supports, and other interventions designed to support family caregivers. This report also assesses and recommends policies to address the needs of family caregivers and to minimize the barriers that they encounter in trying to meet the needs of older adults.

**wellness topics for seniors: Handbook of Mental Health and Aging** Nathan Hantke, Amit Etkin, Ruth O'Hara, 2020-04-11 *The Handbook of Mental Health and Aging*, Third Edition provides a foundational background for practitioners and researchers to understand mental health care in older adults as presented by leading experts in the field. Wherever possible, chapters integrate research into clinical practice. The book opens with conceptual factors, such as the epidemiology of mental health disorders in aging and cultural factors that impact mental health. The book transitions into neurobiological-based topics such as biomarkers, age-related structural changes in the brain, and current models of accelerated aging in mental health. Clinical topics include dementia, neuropsychology, psychotherapy, psychopharmacology, mood disorders, anxiety, schizophrenia, sleep disorders, and substance abuse. The book closes with current and future trends in geriatric mental health, including the brain functional connectome, repetitive transcranial magnetic stimulation (rTMS), technology-based interventions, and treatment innovations. - Identifies factors influencing mental health in older adults - Includes biological, sociological, and psychological factors - Reviews epidemiology of different mental health disorders - Supplies separate chapters on grief, schizophrenia, mood, anxiety, and sleep disorders - Discusses biomarkers and genetics of mental health and aging - Provides assessment and treatment approaches

**wellness topics for seniors: Providing Healthy and Safe Foods As We Age** Institute of Medicine, Food and Nutrition Board, Food Forum, 2010-11-29 Does a longer life mean a healthier life? The number of adults over 65 in the United States is growing, but many may not be aware that they are at greater risk from foodborne diseases and their nutritional needs change as they age. The IOM's Food Forum held a workshop October 29-30, 2009, to discuss food safety and nutrition concerns for older adults.

**wellness topics for seniors: Age-Friendly Health Systems** Terry Fulmer, Leslie Pelton, Jinghan Zhang, 2022-02 According to the US Census Bureau, the US population aged 65+ years is expected to nearly double over the next 30 years, from 43.1 million in 2012 to an estimated 83.7 million in 2050. These demographic advances, however extraordinary, have left our health systems behind as they struggle to reliably provide evidence-based practice to every older adult at every care interaction. *Age-Friendly Health Systems* is an initiative of The John A. Hartford Foundation and the Institute for Healthcare Improvement (IHI), in partnership with the American Hospital Association (AHA) and the Catholic Health Association of the United States (CHA), designed *Age-Friendly Health*

Systems to meet this challenge head on. Age-Friendly Health Systems aim to: Follow an essential set of evidence-based practices; Cause no harm; and Align with What Matters to the older adult and their family caregivers.

**wellness topics for seniors:** *Preventing Alzheimer's Disease* National Institutes of Health, National Institute on Aging, 2017-02-16 This booklet summarizes what scientists have learned so far and where research is headed. There is no definitive evidence yet about what can prevent Alzheimer's or age-related cognitive decline. What we do know is that a healthy lifestyle—one that includes a healthy diet, physical activity, appropriate weight, and no smoking—can maintain and improve overall health and well-being. Making healthy choices can also lower the risk of certain chronic diseases, like heart disease and diabetes, and scientists are very interested in the possibility that a healthy lifestyle might have a beneficial effect on Alzheimer's as well. In the meantime, as research continues to pinpoint what works to prevent Alzheimer's, people of all ages can benefit from taking positive steps to get and stay healthy.

**wellness topics for seniors:** *Nursing for Wellness in Older Adults* Carol A. Miller, 2009 Now in its Fifth Edition, this text provides a comprehensive and wellness-oriented approach to the theory and practice of gerontologic nursing. Organized around the author's unique functional consequences theory of gerontologic nursing, the book explores normal age-related changes and risk factors that often interfere with optimal health and functioning, to effectively identify and teach health-promotion interventions. The author provides research-based background information and a variety of practical assessment and intervention strategies for use in every clinical setting. Highlights of this edition include expanded coverage of evidence-based practice, more first-person stories, new chapters, and clinical tools such as assessment tools recommended by the Hartford Institute of Geriatric Nursing.

**wellness topics for seniors:** *Health and Safety Needs of Older Workers* Institute of Medicine, National Research Council, Division of Behavioral and Social Sciences and Education, Board on Behavioral, Cognitive, and Sensory Sciences, Committee on the Health and Safety Needs of Older Workers, 2004-03-26 Mirroring a worldwide phenomenon in industrialized nations, the U.S. is experiencing a change in its demographic structure known as population aging. Concern about the aging population tends to focus on the adequacy of Medicare and Social Security, retirement of older Americans, and the need to identify policies, programs, and strategies that address the health and safety needs of older workers. Older workers differ from their younger counterparts in a variety of physical, psychological, and social factors. Evaluating the extent, causes, and effects of these factors and improving the research and data systems necessary to address the health and safety needs of older workers may significantly impact both their ability to remain in the workforce and their well being in retirement. *Health and Safety Needs of Older Workers* provides an image of what is currently known about the health and safety needs of older workers and the research needed to encourage social policies that guarantee older workers a meaningful share of the nation's work opportunities.

**wellness topics for seniors:** *Exercise for Aging Adults* Gail M. Sullivan, Alice K. Pomidor, 2015-08-10 This book translates the new findings in exercise research for the elderly for busy practitioners, trainees, students and administrators. This book provides practical strategies that can be implemented immediately in the common settings in which practitioners care for adults. The format includes key points and case examples which showcase the strong evidence supporting exercise by older adults as a key tool to enhance health, prevent serious outcomes, such as hospitalization and functional loss, and as part of the treatment plan for diseases that are common in older adults. Written by experts in the field of exercise in older persons, this book is a guide to maintaining quality of life and functional independence from frail to healthy aging adults. Strategies and exercises are discussed for specific care settings and illustrated via links to video examples, to ensure readers can immediately apply described techniques. *Exercise for Aging Adults: A Guide for Practitioners* is a useful tool for physicians, residents in training, medical students, physical therapists, gerontology advance practice nurse practitioners, assisted living facility administrators,

directors of recreation, and long-term care directors.

**wellness topics for seniors:** *Designing for Older Adults* Arthur D. Fisk, Wendy A. Rogers, Neil Charness, Sara J. Czaja, Joseph Sharit, 2004-01-14 As life expectancy increases, older workers and the retired form a large and growing proportion of the world's population. Professionals working to develop systems and environments need to better accommodate the user needs of the older adult. This new guide provides a practical introduction to human factors and the older adult. It considers the subject primarily from an engineering psychology perspective, heavily grounded in today's scientific knowledge. The authors show how current understanding of age-related issues of perception, cognition, and movement control can be applied in practice. They also provide a reference source with guidelines and advice for design issues ranging from lighting, computer input device selection, and web site design, to training program development and work task design. The text draws on research-oriented work and presents this in a form that can be used by the broad audience of product designers, health care practitioners, managers, and others who need answers to problems and require sound recommendations for design.

**wellness topics for seniors:** *World Report on Ageing and Health* World Health Organization, 2015-10-22 The WHO World report on ageing and health is not for the book shelf it is a living breathing testament to all older people who have fought for their voice to be heard at all levels of government across disciplines and sectors. - Mr Bjarne Hastrup President International Federation on Ageing and CEO DaneAge This report outlines a framework for action to foster Healthy Ageing built around the new concept of functional ability. This will require a transformation of health systems away from disease based curative models and towards the provision of older-person-centred and integrated care. It will require the development sometimes from nothing of comprehensive systems of long term care. It will require a coordinated response from many other sectors and multiple levels of government. And it will need to draw on better ways of measuring and monitoring the health and functioning of older populations. These actions are likely to be a sound investment in society's future. A future that gives older people the freedom to live lives that previous generations might never have imagined. The World report on ageing and health responds to these challenges by recommending equally profound changes in the way health policies for ageing populations are formulated and services are provided. As the foundation for its recommendations the report looks at what the latest evidence has to say about the ageing process noting that many common perceptions and assumptions about older people are based on outdated stereotypes. The report's recommendations are anchored in the evidence comprehensive and forward-looking yet eminently practical. Throughout examples of experiences from different countries are used to illustrate how specific problems can be addressed through innovation solutions. Topics explored range from strategies to deliver comprehensive and person-centred services to older populations to policies that enable older people to live in comfort and safety to ways to correct the problems and injustices inherent in current systems for long-term care.

**wellness topics for seniors:** *Mental Health and Illness of the Elderly* Helen Chiu, Kenneth Shulman, 2017-08-22 This book consolidates current knowledge in the field and discusses psychiatric disorders among the elderly, while bridging the gap between clinical practice and the socio-cultural contexts. The book is particularly important in the face of rapidly changing conditions globally and challenges such as migration, war and violence, diminishing physical health due to ageing and their impact on the mental health of elderly. Longevity is a great gift of medical sciences and modern health care and since the benefit of longevity comes with specific mental health issues of the elderly, this book responds to the heightened need to understand and address the mental health challenges of the elderly.

**wellness topics for seniors:** *Investing in the Health and Well-Being of Young Adults* National Research Council, Institute of Medicine, Board on Children, Youth, and Families, Committee on Improving the Health, Safety, and Well-Being of Young Adults, 2015-01-27 Young adulthood - ages approximately 18 to 26 - is a critical period of development with long-lasting implications for a

person's economic security, health and well-being. Young adults are key contributors to the nation's workforce and military services and, since many are parents, to the healthy development of the next generation. Although 'millennials' have received attention in the popular media in recent years, young adults are too rarely treated as a distinct population in policy, programs, and research. Instead, they are often grouped with adolescents or, more often, with all adults. Currently, the nation is experiencing economic restructuring, widening inequality, a rapidly rising ratio of older adults, and an increasingly diverse population. The possible transformative effects of these features make focus on young adults especially important. A systematic approach to understanding and responding to the unique circumstances and needs of today's young adults can help to pave the way to a more productive and equitable tomorrow for young adults in particular and our society at large. Investing in The Health and Well-Being of Young Adults describes what is meant by the term young adulthood, who young adults are, what they are doing, and what they need. This study recommends actions that nonprofit programs and federal, state, and local agencies can take to help young adults make a successful transition from adolescence to adulthood. According to this report, young adults should be considered as a separate group from adolescents and older adults. Investing in The Health and Well-Being of Young Adults makes the case that increased efforts to improve high school and college graduate rates and education and workforce development systems that are more closely tied to high-demand economic sectors will help this age group achieve greater opportunity and success. The report also discusses the health status of young adults and makes recommendations to develop evidence-based practices for young adults for medical and behavioral health, including preventions. What happens during the young adult years has profound implications for the rest of the life course, and the stability and progress of society at large depends on how any cohort of young adults fares as a whole. Investing in The Health and Well-Being of Young Adults will provide a roadmap to improving outcomes for this age group as they transition from adolescence to adulthood.

What technologies offer the most potential benefit? What challenges must be overcome, what problems must be solved, for this promise to be fulfilled? How can federal agencies like the National Institute on Aging best use their resources to support the translation from laboratory findings to useful, marketable products and services? *Technology for Adaptive Aging* is the product of a workshop that brought together distinguished experts in aging research and in technology to discuss applications of technology to communication, education and learning, employment, health, living environments, and transportation for older adults. It includes all of the workshop papers and the report of the committee that organized the workshop. The committee report synthesizes and evaluates the points made in the workshop papers and recommends priorities for federal support of translational research in technology for older adults.

**wellness topics for seniors:** A Man's Guide to Healthy Aging Edward H. Thompson Jr., Lenard W. Kaye, 2013-11-25 Explores all aspects of health as men reach middle age and beyond. As they reach middle age, most men begin looking forward to what's next. They gear up to experience renewed productivity and purpose and are more conscious of their health. *A Man's Guide to Healthy Aging* is an authoritative resource for them, and for older men, as well. In collaboration with a variety of medical experts, the authors provide a comprehensive guide to healthy aging from a man's perspective. Edward H. Thompson, Jr., and Lenard W. Kaye—a medical sociologist and a gerontologist and social worker—offer invaluable information in four parts: • *Managing Our Lives* describes the actions men can take to stay healthy. Here is information about how to eat well, reduce stress, and stay active for better overall health. • *Mind and Body* considers how physical health and state of mind are connected. It explores sleep, drug and alcohol use, spirituality, and attitudes about appearance—and explains how all of these factors affect mental health. • *Bodily Health* examines how body systems function and what changes may occur as men age. It covers the body from head to toe and reviews how to manage chronic diseases such as cancer, diabetes, and heart conditions. • *Living with Others* shows the importance of interacting with friends and family. Topics include sexual intimacy, friendship, and caregiving, as well as how men can make the best decisions about end-of-life issues for themselves and their loved ones. Refuting the ageist stereotype that men spend their later years winding down, this book will help men reinvent themselves once, twice, or more—by managing their health, creating new careers, and contributing their skills and experiences to their communities.

**wellness topics for seniors: Preparing for an Aging World** National Research Council, Division of Behavioral and Social Sciences and Education, Committee on National Statistics, Committee on Population, Panel on a Research Agenda and New Data for an Aging World, 2001-06-26 Aging is a process that encompasses virtually all aspects of life. Because the speed of population aging is accelerating, and because the data needed to study the aging process are complex and expensive to obtain, it is imperative that countries coordinate their research efforts to reap the most benefits from this important information. Preparing for an Aging World looks at the behavioral and socioeconomic aspects of aging, and focuses on work, retirement, and pensions; wealth and savings behavior; health and disability; intergenerational transfers; and concepts of well-being. It makes recommendations for a collection of new, cross-national data on aging populations—data that will allow nations to develop policies and programs for addressing the major shifts in population age structure now occurring. These efforts, if made internationally, would advance our understanding of the aging process around the world.

**wellness topics for seniors:** *Sleep and Aging* Mark P. Mattson, 2005-06-20 The book describes the mechanisms involved in the maintenance of neuroendocrine-immune interactions in ageing. The lack of this maintenance leads to the appearance of age-related diseases (cancer, infections, dementia) and subsequent disability. The capacity of some hormones or nutritional factors in restoring and remodelling the neuroendocrine-immune response during ageing is reported presenting possible new anti-ageing strategies in order to reach healthy ageing and longevity

well-being of your team, or a library worker excited to launch a health and wellness movement in your library, you'll find sensible guidance and inspiration in Newman's handbook. As part of their dedication to improving the lives of their patrons, libraries have long offered services, programs, and outreach dedicated to the health and wellness of their communities. There is a growing recognition that library workers themselves are in urgent need of such attention; low morale, and complaints of burnout and a toxic work environment, are only a few of the obvious symptoms. The good news is that by turning inward, libraries can foster wellness in their workplace and make a real difference in the day-to-day lives of their staff. Newman, who has led a popular course on the subject attended by workers from many types of different libraries, here takes a holistic approach to examine why and how libraries should focus on improving the health and wellness of employees. Filled with hands-on advice, examples of successful initiatives, and suggested action steps, in this book readers will learn how to define health and wellness, including its physical, psychological, and social aspects, and why they touch upon nearly everything that happens in the workplace; what a workplace looks like when it strives to ensure the complete physical, mental, and social well-being of workers, and the ways in which this approach to a work environment benefits both the library and the community it serves; the role played by the physical aspects of the workplace, such as the ergonomics of sitting and standing desks, the effects of air quality and smell on worker health and productivity, and noise levels stemming from open plan workspaces; about key policies relating to wages, working schedules, where employees work, and child and elder care; real-world advice on addressing complicated workplace issues like emotional and invisible labor, with a look at the part that burdensome or indifferent policies and practices can play in contributing to compassion fatigue and burnout; ways to make healthy choices for oneself and encourage healthy choices in co-workers and staff; concrete, evidence-based steps that libraries can take to improve workplace wellness; how to make a lasting difference by focusing on one aspect they can change personally and one that they can advocate changing library wide.
