whiskers and paws veterinary wellness clinic: The Health Benefits of Dog Walking for People and Pets Rebecca Ann Johnson, Alan M. Beck, Sandra K. McCune, 2011 Obesity is a national epidemic in the United States. It is estimated that by 2018 the cost of treating weight-related illnesses will double to almost \$350 billion a year, while a 2010 report by the US Surgeon General estimates that two-thirds of American adults and almost one in three children are now overweight or obese. This volume originated in a special 2009 symposium funded in part by a grant from the Eunice Kennedy Shriver National Institute of Child Health and Human Development (NICHD) and sponsorship from Mars WalthamA on how human-animal interaction may help fight obesity across the lifespan. The authors present scientific evidence about the benefits of dog walking for improving human and animal health, and case studies of programs that are using this powerful expression of the human-animal bond to combat obesity. The volume is especially valuable as a sourcebook of evidence-based studies for public health professionals treating overweight humans and veterinarians treating obese dogs.

whiskers and paws veterinary wellness clinic: The Forever Dog Rodney Habib, Karen Shaw Becker, 2024-09-10 #1 New York Times Bestseller In this pathbreaking guide, two of the world's most popular and trusted pet care advocates reveal new science to teach us how to delay aging and provide a long, happy, healthy life for our canine companions. Like their human counterparts, dogs have been getting sicker and dying prematurely over the past few decades. Why? Scientists are beginning to understand that the chronic diseases afflicting humans--cancer, obesity, diabetes, organ degeneration, and autoimmune disorders--also beset canines. As a result, our beloved companions are vexed with preventable health problems throughout much of their lives and suffer shorter life spans. Because our pets can't make health and lifestyle decisions for themselves, it's up to pet parents to make smart, science-backed choices for lasting vitality and health. The Forever Dog gives us the practical, proven tools to protect our loyal four-legged companions. Rodney Habib and Karen Becker, DVM, globetrotted (pre-pandemic) to galvanize the best wisdom from top geneticists, microbiologists, and longevity researchers; they also interviewed people whose dogs have lived into their 20s and even 30s. The result is this unprecedented and comprehensive guide, filled with surprising information, invaluable advice, and inspiring stories about dogs and the people who love them. The Forever Dog prescriptive plan focuses on diet and nutrition, movement, environmental exposures, and stress reduction, and can be tailored to the genetic predisposition of particular breeds or mixes. The authors discuss various types of food--including what the commercial manufacturers don't want us to know--and offer recipes, easy solutions, and tips for making sure our dogs obtain the nutrients they need. Habib and Dr. Becker also explore how external factors we often don't think about can greatly affect a dog's overall health and wellbeing, from everyday insults to the body and its physiology, to the role our own lifestyles and our vets' choices play. Indeed, the health equation works both ways and can travel up the leash. Medical breakthroughs have expanded our choices for canine health--if you know what they are. This definitive dog-care guide empowers us with the knowledge we need to make wise choices, and to keep our dogs healthy and happy for years

to come.

whiskers and paws veterinary wellness clinic: *How Stella Learned to Talk* Christina Hunger, 2021-05-04 INSTANT NEW YORK TIMES BESTSELLER An incredible, revolutionary true

story and surprisingly simple guide to teaching your dog to talk from speech-language pathologist Christina Hunger, who has taught her dog, Stella, to communicate using simple paw-sized buttons associated with different words. When speech-language pathologist Christina Hunger first came home with her puppy, Stella, it didn't take long for her to start drawing connections between her job and her new pet. During the day, she worked with toddlers with significant delays in language development and used Augmentative and Alternative Communication (AAC) devices to help them communicate. At night, she wondered: If dogs can understand words we say to them, shouldn't they be able to say words to us? Can dogs use AAC to communicate with humans? Christina decided to put her theory to the test with Stella and started using a paw-sized button programmed with her voice to say the word "outside" when clicked, whenever she took Stella out of the house. A few years later, Stella now has a bank of more than thirty word buttons, and uses them daily either individually or together to create near-complete sentences. *How Stella Learned to Talk* is part memoir and part how-to guide. It chronicles the journey Christina and Stella have taken together, from the day they met, to the day Stella "spoke" her first word, and the other breakthroughs they've had since. It also reveals the techniques Christina used to teach Stella, broken down into simple stages and actionable steps any dog owner can use to start communicating with their pets. Filled with conversations that Stella and Christina have had, as well as the attention to developmental detail that only a speech-language pathologist could know, *How Stella Learned to Talk* will be the indispensable dog book for the new decade.
