xbody health wellness wayne nj: **NeuroKinetic Therapy** David Weinstock, 2012-06-05

NeuroKinetic Therapy is based on the premise that when an injury has occurred, certain muscles shut down or become inhibited, forcing other muscles to become overworked. This compensation pattern can create pain or tightness. By applying light pressure that the client then resists, the practitioner can evaluate the strength or weakness of each muscle, revealing the sources of injury and retraining the client's body to remove the compensation patterns—reprogramming the body at the neural level. This easy-to-follow practitioner's manual presents a series of muscle tests specially designed to uncover and resolve compensation patterns in the body. Author David Weinstock begins by explaining how this approach stimulates the body and mind to resolve pain. Organized anatomically, each section of the book includes clear photographs demonstrating correct positioning of the muscle accompanied by concise explanations and instructions. Labeled anatomical illustrations appear at the end of each section showing the relationships between the muscles and muscle groups. This essential resource is especially useful for physical therapists, chiropractors, orthopedists, and massage therapists looking for new ways to treat underlying causes of pain.

xbody health wellness wayne nj: Art, the Sublime, and Movement Amanda Du Preez, 2022

This book is a critical interdisciplinary approach to the study of contemporary visual culture and image studies, exploring ideas about space and place and ultimately contributing to the debates about being human in the digital age. The upward and downward pull seem in a constant contest for humanity's attention. Both forces are powerful in the effects and affects they invoke. When tracing this iconological history, Amanda du Preez's starts in the early nineteenth century, moving into the twentieth century and then spanning the whole century up to contemporary twentieth-first century screen culture and space travels. Du Preez parses the intersecting pathways between Heaven and Earth, up and down, flying and falling through the concept of being spaced out. The idea of being spaced out is applied as a metaphor to trace the visual history of sublime encounters that displace Earth, gravity, locality, belonging, home, real life and embodiment. The book will be of interest to scholars working in art history, visual culture, media and cultural studies, phenomenology, digital culture, mobility studies, and urban studies--
