bliss acupuncture wellness clinic: Sweet Spots Mattie-Martha Sempert, 2021-12-30 Sweet Spots thinks transversally across language and body, and between text and tissue. This assemblage of essays collectively proposes that words--that is, language that lands as written text--are more-than-human material. And, these materials, composed of forces and flows and tendencies, are capable of generating text-flesh that grows into a thinking in the making. The practice of acupuncture--and its relational thinking--often makes its presence felt to twirl the text-tissue of the bodying essays. Ficto-critical thinking is threaded throughout to activate concepts from process philosophy and use the work of other thinkers (William James, Felix Guattari and Gilles Deleuze, Baruch Spinoza, and Virginia Woolf, to name a few) to forge imaginative connections. Entangled in the text-tissue are an assortment of entities, such as bickering body parts, quivering jellyfish, heart pacemaker cells, a narwhal tooth, Taoist parables, always with ubiquitous, stretchy connective tissue--from gooey interstitial fluid to thick planes of fascia--ever present to ensure that the essaying bodies become, what Alfred North Whitehead calls the one-which-includes-the-many-includes-the-one. The essaying bodies orient towards the sweetest sweet spot which is found, not in the center, but slightly askew, felt in the reverbing more-than that carries their potential. Crucially, this produces a shift in perspective away from self-enclosed bodies and experts toward a care for the connective tissue of relation.

bliss acupuncture wellness clinic: How Tobacco Smoke Causes Disease United States. Public Health Service. Office of the Surgeon General, 2010 This report considers the biological and behavioral mechanisms that may underlie the pathogenicity of tobacco smoke. Many Surgeon General's reports have considered research findings on mechanisms in assessing the biological plausibility of associations observed in epidemiologic studies. Mechanisms of disease are important because they may provide plausibility, which is one of the guideline criteria for assessing evidence on causation. This report specifically reviews the evidence on the potential mechanisms by which smoking causes diseases and considers whether a mechanism is likely to be operative in the production of human disease by tobacco smoke. This evidence is relevant to understanding how smoking causes disease, to identifying those who may be particularly susceptible, and to assessing the potential risks of tobacco products.

bliss acupuncture wellness clinic: Total Recovery Gary Kaplan, 2014-05-06 About 100 million Americans live with some form of chronic pain—more than the combined number who suffer from diabetes, heart disease, and cancer. But chronic pain has always been a mystery. It often returns at the slightest provocation, even when doctors can't find anything wrong. Oddly enough, whether the pain is physical or emotional, traumatic or slight, our brains register all pain as the same thing, and these signals can keep firing in the nervous system for months, even years. In Total Recovery, Dr. Gary Kaplan argues that we've been thinking about disease all wrong. Drawing on

dramatic patient stories and cutting-edge research, the book reveals that chronic physical and emotional pain are two sides of the same coin. New discoveries show that disease is not the result of a single event but an accumulation of traumas. Every injury, every infection, every toxin, and every emotional blow generates the same reaction: inflammation, activated by tiny cells in the brain, called microglia. Turned on too often from too many assaults, it can have a devastating cumulative effect. Conventional treatment for these conditions is focused on symptoms, not causes, and can leave patients locked into a lifetime of pain and suffering. Dr. Kaplan's unified theory of chronic pain and depression helps us understand not only the cause of these conditions but also the issues we must address to create a pathway to healing. With this revolutionary new framework in place, we have been given the keys to recover.

bliss acupuncture wellness clinic: *Pragmatics of Human Communication: A Study of Interactional Patterns, Pathologies and Paradoxes* Paul Watzlawick, Janet Beavin Bavelas, Don D. Jackson, 2011-04-25 The properties and function of human communication. Called "one of the best books ever about human communication," and a perennial bestseller, *Pragmatics of Human Communication* has formed the foundation of much contemporary research into interpersonal communication, in addition to laying the groundwork for context-based approaches to psychotherapy. The authors present the simple but radical idea that problems in life often arise from issues of communication, rather than from deep psychological disorders, reinforcing their conceptual explorations with case studies and well-known literary examples. Written with humor and for a variety of readers, this book identifies simple properties and axioms of human communication and demonstrates how all communications are actually a function of their contexts. Topics covered in this wide-ranging book include: the origins of communication; the idea that all behavior is communication; meta-communication; the properties of an open system; the family as a system of

communication; the nature of paradox in psychotherapy; existentialism and human communication.
