broussard primary care and wellness: Next Medicine Walter Bortz, MD, 2011-01-03 Every

year, the average American spends about \$7,300 on medical expenses. The typical Canadian pays \$2,700, the Briton only \$2,000. And yet, according to the World Health Organization, our healthcare system, in terms of total quality, ranks thirty-eighth in the world, right between Costa Rica and Slovenia. Not only do 40 million Americans lack health insurance, but more than 200,000 die each year because of medical mistakes. Our average life expectancy is lower than Cuba's. In *Next Medicine*, Dr. Walter Bortz zeroes in on why the American medicine is spiraling toward disaster. A physician with fifty years of experience and a leading authority on aging, Bortz argues that the financial interests of biotech and drug companies have distorted the healthcare system. Thanks to them, medicine today is economically motivated to treat disease rather than to prevent it. Heart disease, for example, is widely treated with drug interventions and invasive surgery--both of which are extravagantly profitable for pharmaceutical giants and hospitals. Daily exercise and a healthy diet, on the other hand, can prevent heart disease, and can be obtained by patients essentially for free--but there's no money in that. The medical-industrial complex has a vested interest in keeping us sick, and until that changes medicine will fail to effectively address the leading cause of disability and mortality today: chronic diseases like diabetes that are largely preventable. Bortz proposes a medical system that emphasizes personal responsibility and provides incentives for healthy lifestyle choices, along with new training for medical professionals. Through a lively narrative full of personal anecdotes and jarring statistics, Bortz makes a powerful case for a radically new medical system--one that is based on rigorous science and loosens the strangle hold of corporate interests on American health.

broussard primary care and wellness: *The Calling* Christopher Chen, Gordon Chen, 2022-08-16 A CT scan revealed Dr. James Chen, a Miami physician, had a cancerous, inoperable, tumor behind his nose. The prognosis was bleak. Dr. Chen had eight weeks to live. Dr. Chen and his sons, Chris and Gordon, looked for a miracle. Chris was completing a cardiology fellowship. Gordon was finishing medical school. They knew what they were up against. Even still, they were shocked when a local oncologist told them, "The first available appointment is in six weeks." James and his sons were suddenly patients, forced to look at the healthcare system from the other end of the stethoscope. They didn't like what they saw—expensive, uncoordinated, and ineffective care. At one point James asked his sons, "If a family of doctors with connections can't navigate this system, what chance do my patients have?" The Chens found their calling. Together with James' wife Mary, Chris's wife Stephanie (an attorney), and Gordon's wife Jessica (another doctor) they created ChenMed, a physician-led company that serves the underserved. ChenMed puts their patients from forgotten communities first and focuses on accountable, compassionate care that improves health. In *The Calling*, Chris and Gordon share how the family succeeded beyond their wildest expectations through a combination of determination, data, family, and faith. They turned what could have been a tragedy into an opportunity that will revolutionize healthcare delivery for years to come. *The Calling* will give you hope.

Ellison, 2020-03-31 The New York Times bestselling Brit in the FBI series continues with this thrilling "popcorn movie in print form" (Associated Press) pitting special agents Nicholas Drummond and Michaela Caine against a private French space agency that has the power to end the world as we know it. Galactus, France's answer to SpaceX, has just launched a communications satellite into orbit, but the payload actually harbors a frightening weapon: a nuclear bomb that can trigger a

massive electromagnetic pulse (EMP). When the satellite is in position, Galactus's second-in-command, Dr. Nevaeh Patel, will have the power to lay waste to the world. A former astronaut, Patel believes she is following the directions of the Numen, aliens who saved her life when she space-walked outside the International Space Station. She is convinced that with the Holy Grail—just discovered by the owner of Galactus, eccentric treasure hunter Jean-Pierre Broussard—she can be reunited with the Numen, change the world's destiny, and become immortal with them. The countdown has begun when Special Agents Nicholas Drummond and Michaela Caine are thrown into the pending disaster. They must stop the EMP that would wreak havoc on communication and electronic systems on Earth, resulting in chaos and anarchy. With their high-octane and suspenseful prose, "Coulter and Ellison are a thriller writer's dream team, and *The Last Second* is some of their best work yet" (*The Real Book Spy*).

broussard primary care and wellness: *Creating Equal Opportunities for a Healthy Weight* Institute of Medicine, Food and Nutrition Board, Standing Committee on Childhood Obesity Prevention, 2013-12-25 *Creating Equal Opportunities for a Healthy Weight* is the summary of a workshop convened by the Institute of Medicine's Standing Committee on Childhood Obesity Prevention in June 2013 to examine income, race, and ethnicity, and how these factors intersect with childhood obesity and its prevention. Registered participants, along with viewers of a simultaneous webcast of the workshop, heard a series of presentations by researchers, policy makers, advocates, and other stakeholders focused on health disparities associated with income, race, ethnicity, and other characteristics and on how these factors intersect with obesity and its prevention. The workshop featured invited presentations and discussions concerning physical activity, healthy food access, food marketing and messaging, and the roles of employers, health care professionals, and schools. The IOM 2012 report *Accelerating Progress in Obesity Prevention* acknowledged that a variety of characteristics linked historically to social exclusion or discrimination, including race, ethnicity, religion, socioeconomic status, gender, age, mental health, disability, sexual orientation or gender identity, geographic location, and immigrant status, can thereby affect opportunities for physical activity, healthy eating, health care, work, and education. In many parts of the United States, certain racial and ethnic groups and low-income individuals and families live, learn, work, and play in places that lack health-promoting resources such as parks, recreational facilities, high-quality grocery stores, and walkable streets. These same neighborhoods may have characteristics such as heavy traffic or other unsafe conditions that discourage people from walking or being physically active outdoors. The combination of unhealthy social and environmental risk factors, including limited access to healthy foods and opportunities for physical activity, can contribute to increased levels of chronic stress among community members, which have been linked

to increased levels of sedentary activity and increased calorie consumption. Creating Equal Opportunities for a Healthy Weight focuses on the key obesity prevention goals and recommendations outlined in Accelerating Progress in Obesity Prevention through the lens of health equity. This report explores critical aspects of obesity prevention, while discussing potential future research, policy, and action that could lead to equity in opportunities to achieve a healthy weight.

broussard primary care and wellness: Agile Implementation Malaz Boustani, Jose Azar, Craig A. Solid, 2020-01-07 Agile Implementation describes the underlying theories and frameworks that explain health delivery systems and lays out the 8 steps of the Agile Implementation Model founded by Malaz Boustani, MD, MPH and Jose Azar, MD. In today's complex healthcare environment, implementing evidence-based care into real-world practices is difficult and time consuming. Even methods that are known to be effective allow for limited flexibility and therefore fail as often as they succeed. Through much study and experimentation, Malaz Boustani, MD, MPH, Jose Azar, MD, and Craig A. Solid, PhD have come to understand how individuals' interactions within the complex social systems of hospitals, clinics, and other care delivery organizations shape the decisions and behaviors of those involved. Upon this foundation and through leveraging theories of behavioral economics, we have developed the Agile Implementation Model, a process for selecting, adapting, implementing, evaluating, sustaining, and scaling evidence-based healthcare interventions. This model acknowledges the uniqueness of each individual facility and considers individuals within the system to be semiautonomous but interconnected. In tandem with illustrative examples, Agile Implementation describes the underlying theories and frameworks that explain health delivery systems and lays out the 8 steps of the Agile Implementation Model. Upon completing Agile Implementation, readers have a better understanding of why certain quality initiatives succeed while others fail and have tangible, actionable tools for implementing effective and sustainable change in the healthcare setting.

broussard primary care and wellness: *Advancing Oral Health in America* Institute of Medicine, Board on Health Care Services, Committee on an Oral Health Initiative, 2012-01-05 Though it is highly preventable, tooth decay is a common chronic disease both in the United States and worldwide. Evidence shows that decay and other oral diseases may be associated with adverse pregnancy outcomes, respiratory disease, cardiovascular disease, and diabetes. However, individuals and many health care professionals remain unaware of the risk factors and preventive approaches for many oral diseases. They do not fully appreciate how oral health affects overall health and well-being. In *Advancing Oral Health in America*, the Institute of Medicine (IOM) highlights the vital role that the Department of Health and Human Services (HHS) can play in improving oral health and oral health care in the United States. The IOM recommends that HHS design an oral health initiative which has clearly articulated goals, is coordinated effectively, adequately funded and has high-level accountability. In addition, the IOM stresses three key areas needed for successfully maintaining oral health as a priority issue: strong leadership, sustained interest, and the involvement of multiple stakeholders from both the public and private sectors. *Advancing Oral Health in America* provides practical recommendations that the Department of Health and Human Services can use to improve oral health care in America. The report will serve as a vital resource for federal health agencies, health care professionals, policy makers, researchers, and public and private health organizations.

In general, life expectancy has increased by more than thirty years since 1900 and much of this improvement is due to the reduction of infant and early childhood

mortality. Given this trajectory toward a healthier childhood, we begin the 21st-century with a shocking development—an epidemic of obesity in children and youth. The increased number of obese children throughout the U.S. during the past 25 years has led policymakers to rank it as one of the most critical public health threats of the 21st-century. Preventing Childhood Obesity provides a broad-based examination of the nature, extent, and consequences of obesity in U.S. children and youth, including the social, environmental, medical, and dietary factors responsible for its increased prevalence. The book also offers a prevention-oriented action plan that identifies the most promising array of short-term and longer-term interventions, as well as recommendations for the roles and responsibilities of numerous stakeholders in various sectors of society to reduce its future occurrence. Preventing Childhood Obesity explores the underlying causes of this serious health problem and the actions needed to initiate, support, and sustain the societal and lifestyle changes that can reverse the trend among our children and youth.
