Does your family come from a long line of Alzheimer's, cancer, or heart disease? Will nothing help your aging skin or declining libido or flagging energy? This book is for you. The assumption is that we are our genes. The scientific reality is that ninety percent of the signs of aging and disease are caused by lifestyle choices, not your genes. For decades, the diet wars have pitted advocates for the low-carb, high-fat paleo diet against advocates of the exclusively plant-based vegan diet and dozens of other diets leaving most of us bewildered and confused. For those of us on the sidelines, trying to figure out which approach is best has been nearly impossible—both extreme diets have unique benefits and drawbacks. With The Pegan Diet's food-is-medicine approach, Mark Hyman explains how to take the best aspects of the paleo diet (good fats, limited refined carbs, limited sugar) and combine them with the vegan diet (lots and lots of fresh, healthy veggies) to create a delicious diet that is not only good for your brain and your body, but also good for the planet. cinco ranch family wellness: *The Soil Will Save Us* Kristin Ohlson, 2014-03-18 Thousands of years of poor farming and ranching practices—and, especially, modern industrial agriculture—have led to the loss of up to 80 percent of carbon from the world's soils. That carbon is now floating in the atmosphere, and even if we stopped using fossil fuels today, it would continue warming the planet. In *The Soil Will Save Us*, journalist and bestselling author Kristin Ohlson makes an elegantly argued, passionate case for our great green hope—a way in which we can not only heal the land but also turn atmospheric carbon into beneficial soil carbon—and potentially reverse global warming. As the granddaughter of farmers and the daughter of avid gardeners, Ohlson has long had an appreciation for the soil. A chance conversation with a local chef led her to the crossroads of science, farming, food, and environmentalism and the discovery of the only significant way to remove carbon dioxide from the air—an ecological approach that tends not only to plants and animals but also to the vast population of underground microorganisms that fix carbon in the soil. Ohlson introduces the visionaries—scientists, farmers, ranchers, and landscapers—who are figuring out in the lab and on the ground how to build healthy soil, which solves myriad problems: drought, erosion, air and water pollution, and food quality, as well as climate change. Her discoveries and vivid storytelling will revolutionize the way we think about our food, our landscapes, our plants, and our relationship to Earth.
