darwish wellness medical office: Khobar Towers: Tragedy and Response Perry D. Jamieson, 2008 This account of the Khobar Towers bombing tells the story of the horrific attack and the magnificent response of airmen doing their duty under nearly impossible circumstances. None of them view their actions as heroic, yet the reader will marvel at their calm professionalism. All of them say it was just their job, but the reader will wonder how they could be so well trained to act

almost instinctively to do the right thing at the right time. None of them would see their actions as selfless, yet countless numbers refused medical attention until the more seriously injured got treatment. Throughout this book, the themes of duty, commitment, and devotion to comrades resoundingly underscore the notion that America's brightest, bravest, and best wear her uniforms in service to the nation. This book is more than heroic actions, though, for there is also controversy. Were commanders responsible for not adequately protecting their people? What should one make of the several conflicting investigations following the attack? Dr. Jamieson has not shied away from these difficult questions, and others, but has discussed them and other controversial judgments in a straightforward and dispassionate way that will bring them into focus for everyone. It is clear from this book that there is a larger issue than just the response to the bombing. It is the issue of the example set by America's airmen. Future airmen who read this book will be stronger and will stand on the shoulders of those who suffered and those who made the ultimate sacrifice.

darwish wellness medical office: Delivering High-Quality Cancer Care Committee on Improving the Quality of Cancer Care: Addressing the Challenges of an Aging Population, Board on Health Care Services, Institute of Medicine, 2014-01-10 In the United States, approximately 14 million people have had cancer and more than 1.6 million new cases are diagnosed each year. However, more than a decade after the Institute of Medicine (IOM) first studied the quality of cancer care, the barriers to achieving excellent care for all cancer patients remain daunting. Care often is not patient-centered, many patients do not receive palliative care to manage their symptoms and side effects from treatment, and decisions about care often are not based on the latest scientific evidence. The cost of cancer care also is rising faster than many sectors of medicine--having increased to \$125 billion in 2010 from \$72 billion in 2004--and is projected to reach \$173 billion by 2020. Rising costs are making cancer care less affordable for patients and their families and are creating disparities in patients' access to high-quality cancer care. There also are growing shortages of health professionals skilled in providing cancer care, and the number of adults age 65 and older--the group most susceptible to cancer--is expected to double by 2030, contributing to a 45 percent increase in the number of people developing cancer. The current care delivery system is poorly prepared to address the care needs of this population, which are complex due to altered physiology, functional and cognitive impairment, multiple coexisting diseases, increased side effects from treatment, and greater need for social support. Delivering High-Quality Cancer Care: Charting a New Course for a System in Crisis presents a conceptual framework for improving the quality of cancer care. This study proposes improvements to six interconnected components of care: (1) engaged patients; (2) an adequately staffed, trained, and coordinated workforce; (3) evidence-based care; (4) learning health care information technology (IT); (5) translation of evidence into clinical practice, quality measurement and performance improvement; and (6) accessible and affordable care. This report recommends changes across the board in these areas to improve the quality of care. Delivering High-Quality Cancer Care: Charting a New Course for a System in Crisis provides information for cancer care teams, patients and their families, researchers, quality metrics developers, and payers, as well as HHS, other federal agencies, and industry to reevaluate their current roles and responsibilities in cancer care and work together to develop a higher quality care delivery system. By working toward this shared goal, the cancer care community can improve the

quality of life and outcomes for people facing a cancer diagnosis.

darwish wellness medical office: *Resilience, Adaptive Peacebuilding and Transitional Justice* Janine Natalya Clark, Michael Ungar, 2021-10-07 Processes of post-war reconstruction, peacebuilding and reconciliation are partly about fostering stability and adaptive capacity across different social systems. Nevertheless, these processes have seldom been expressly discussed within a resilience framework. Similarly, although the goals of transitional justice – among them (re)establishing the rule of law, delivering justice and aiding reconciliation – implicitly encompass a resilience element, transitional justice has not been explicitly theorised as a process for building resilience in communities and societies that have suffered large-scale violence and human rights violations. The chapters in this unique volume theoretically and empirically explore the concept of resilience in diverse societies that have experienced mass violence and human rights abuses. They analyse the extent to which transitional justice processes have – and can – contribute to resilience and how, in so doing, they can foster adaptive peacebuilding. This book is available as Open Access.

darwish wellness medical office: Oral Health and Herbal Medicine Khalid Rehman

Hakeem, Waseem Mohammed Abdul, Mohd Muzzammil Hussain, Syed Shoeb Iqbal Razvi, 2019-01-03 Oral health loss is one of the major problems existing all over the world and is one of the top causes of death when unmanaged. The oral cavity is home to numerous pathogenic microorganisms, some of which are responsible for the progression and development of various systemic diseases such as cancer, diabetes and myocardial infarction. Worldwide, 60-90% of school children and nearly 100% of adults have dental cavities, often leading to pain and discomfort. There are implications for the global economy as well, due to the continuous burden of investing resources to maintain oral hygiene. Not surprisingly, developing countries are disproportionately affected. There is thus an urgent need to develop economical solutions for the treatment of oral diseases. The trend of exploring plants or plant-derived compounds for the prevention and cure of death-causing diseases is on the rise. The use of traditional medicine for oral diseases is an ancient practice in which medicinal herbs play a major role. Medicinal plants have minimal side effects and no denigrating properties. Accordingly the use of medicinal plants to curtail oral pathogens has been reported by a number of studies. The present book updates the issues related to oral health, oral diseases and the role of medicinal plants in overcoming orally-derived health problems. We also highlight the knowledge gaps in oral health related problems with medicinal plants as one of the solutions. Our ultimate goal is to encourage future research and application of medicinal plants for economical and efficient treatment of oral diseases.

darwish wellness medical office: Digital Criminology Anastasia Powell, Gregory Stratton, Robin Cameron, 2018-06-14 The infusion of digital technology into contemporary society has had significant effects for everyday life and for everyday crimes. Digital Criminology: Crime and Justice in Digital Society is the first interdisciplinary scholarly investigation extending beyond traditional topics of cybercrime, policing and the law to consider the implications of digital society for public engagement with crime and justice movements. This book seeks to connect the disparate fields of criminology, sociology, legal studies, politics, media and cultural studies in the study of crime and justice. Drawing together intersecting conceptual frameworks, Digital Criminology examines conceptual, legal, political and cultural framings of crime, formal justice responses and informal citizen-led justice movements in our increasingly connected global and digital society. Building on case study examples from across Australia, Canada, Europe, China, the UK and the United States, Digital Criminology explores key questions including: What are the implications of an increasingly digital society for crime and justice? What effects will emergent technologies have for how we respond to crime and participate in crime debates? What will be the foundational shifts in criminological research and frameworks for understanding crime and justice in this technologically mediated context? What does it mean to be a 'just' digital citizen? How will digital communications and social networks enable new forms of justice and justice movements? Ultimately, the book advances the case for an emerging digital criminology: extending the practical and conceptual analyses of 'cyber' or 'e' crime beyond a focus foremost on the novelty, pathology and illegality of technology-enabled crimes, to understandings of online crime as inherently social. darwish wellness medical office: Antioxidant-Antidiabetic Agents and Human Health Oluwafemi Oguntibeju, 2014-02-05 The human system employs the use of endogenous enzymatic as well as non-enzymatic antioxidant defence systems against the onslaught of free radicals and oxidative stress. Enzymatic antioxidants and non-enzymatic antioxidants work synergistically with each other, using different mechanisms against different free radicals and stages of oxidative stress. Dietary and lifestyle modifications are seen as the mainstay of treatment and management of chronic

diseases such as diabetes mellitus. The major aims of dietary and lifestyle changes are to reduce weight, improve glycaemic control and reduce the risk of coronary heart disease, which accounts for 70- 80% of deaths among those with diabetes. It is also important to note that medicinal plants have been used as medicines since ancient time, and continue to play significant role even in modern medicine in management and treatment of chronic diseases. Impressive numbers of modern therapeutic agents have been developed from plants. Phytochemicals have been isolated and characterised from fruits such as grapes and apples, vegetables such as broccoli and onion, spices such as turmeric, beverages such as green tea and red wine, as well as many other sources. The WHO estimates that approximately 80% of the worlds inhabitants rely on traditional medicine for their primary health care and many medicinal plants have ethno-medical claims of usefulness in the treatment of diabetes and other chronic diseases globally, and have been employed empirically in antidiabetic, antihyperlipidemic, antihypertensive, antiinflammatory and antiparasitic remedies. This book examines the role of antioxidant-rich natural products in management and treatment of diabetes and other chronic diseases.

In addition to the social context, including the addition of a new family member, many women experience the occurrence or recurrence of psychiatric disorders during the perinatal period. Psychiatric disorders during this period can have negative effects on the fetus, infant and other children in the family, and can result in functional impairment among mothers. The book offers a comprehensive overview of psychopharmacological treatments for nearly all specific psychiatric conditions (e.g. bipolar disorder, panic disorder, obsessive-compulsive disorder) and includes chapters on clinical approaches to treating these disorders. As such, it will appeal to a wide readership, including psychiatrists, obstetricians, gynecologists and pediatricians.

darwish wellness medical office: *Bioactive Components of Human Milk* David S. Newburg, 2001-12-31 The major emphasis in this book is a compilation and definition of what is known about components of human milk, including glycoconjugates, that inhibit common pathogens of the infant. Also discussed are other bioactive constituents whose relevant biological roles are also beginning to be defined. Hormonal and cytokine activity, immunomodulating and autoinflammatory agents, xenobiotics, and conditionally essential nutrients in milk could have roles in the protection of the infant, but may also participate in digestive processes, maternal-infant communication, maturation of the gut, central nervous system, and other components of infant growth and development. Like the protective activities, these are discussed in terms of their presence in milk, structures, potential functions, and structure/function relationship. Components whose role is nutritional support during early development of the infant are also included.
