Understanding the Savvas Realize Math Curriculum for 3rd Grade

Savvas Realize offers a comprehensive 3rd-grade math curriculum designed to meet Common Core State Standards. The program focuses on building a strong foundation in key areas, including:

Operations and Algebraic Thinking: Students will deepen their understanding of multiplication and division, learn about patterns, and solve word problems involving these operations. Expect to see a lot of emphasis on fact fluency and strategic problem-solving.

Number and Operations in Base Ten: This section builds upon earlier learning, focusing on place value, rounding, and performing addition and subtraction with larger numbers. Understanding place value is crucial for success in later grades.

Measurement and Data: Students will explore various units of measurement (length, weight, time), learn to interpret data presented in graphs and charts, and even begin to explore geometric shapes and their attributes.

Geometry: Basic geometric concepts like identifying shapes, understanding their attributes, and partitioning shapes are introduced. This lays the groundwork for more advanced geometry in later years.

The curriculum utilizes a blended learning approach, combining digital resources with traditional textbook components (though the digital aspect is often the primary focus within Savvas Realize). This allows for personalized learning experiences and targeted support for struggling students.
